

Templatized Embed Code - Admin Guide

Last Modified on 06/04/2026 9:18 am IDT

 This article is designated for administrators.

About

The Templatized Embed Code module enables users to share video entries using a customized embed code. The embed code includes HTML structures.

This guide explains how to enable and configure the Templatized Embed Code module in the Configuration Management console.

This module is for both Theming and non-Theming users, however, only Theming users may [allow multiple embed code templates to be defined](#).

For technical support, contact Kaltura Customer Care. For all other inquiries, reach out to your Customer Success Manager.

Configure

1. Log into the Configuration Management console by going to your Video Portal URL and adding `/admin` at the end.
2. Enter your Kaltura user ID and password.
3. Click **Sign In**.

The **Configuration Management** console displays.

Search Configuration

instanceId	1756361.mediaspace.kaltura.com	Unique string to identify that installation of mediaspace. This value can be set during installation only.
privacyContext	MediaSpace	String used to be set as privacy context on root category. This value can be set during installation only.
userRoleProfile	3503841	Metadata Profile ID for user's role per KMS installation instance
title	Kaltura MediaSpace	What is your MediaSpace website title? The website title is displayed in the browser's title bar and usually is displayed in search engine results. Page titles consist of the name of the currently loaded media and the website title. For example, if a page has a video called 'My Video' and 'MediaSpace' is the website title, the page title is: 'My Video - MediaSpace'
footer	MediaSpace™ <a href=http://corp	What is your MediaSpace footer text? default is: MediaSpace video portal by Kaltura
forceIECompatibilityMode	No	Should MediaSpace force IE to use the latest engine when Compatibility Mode is enabled? By default, if compatibility mode is enabled, Internet Explorer renders the page with IE7's engine. Turning on this option forces Internet Explorer to use the latest rendering engine. For more details, please visit this link .
theme		What is the name of your custom MediaSpace theme?

4. In the list of configurable items on the left of your screen, locate and click on **Templatizedembedcode**. (The item will be crossed out because it's disabled by default.)

□ If this module is not in your KMS application, please get in touch with your Kaltura representative to inquire about adding it.

5. The **Templatizedembedcode** window displays.

Templatizedembedcode

Search Configuration

Module Info

name	Templatized Embed Code
description	This module enables users to share video Entries using a customized embed code. The embed code includes HTML structures: HTML template can have special placeholders that will be replaced with certain content: <ul style="list-style-type: none"> {width} - will be replaced with widget id. {entryId} - will be replaced with entry id. {hostName} - will be replaced with host name. {uContent} - will be replaced with uContent (player id). {playerId} - will be replaced with the PID. {width} - will be replaced with the width of the selected embed size. {height} - will be replaced with the height of the selected embed size. {autoplay} - will be replaced with the selected playback time of the entry.
version	1.0.12

enabled Yes Once the module is enabled, the end user will have the ability to copy and paste the embed code defined in this module.

tabName Name of tab or menu item.

multiTemplateEmbed No Allow multiple embed code templates to be defined. If enabled, the embed code template will be selected by the user from a drop-down list.

allowedRoles
 Owner Only
 Co-Editor
 Co-Publisher
 Specific Users / Groups
 anonymousRole
 viewerRole
 privacyOnlyRole
 adminRole
 unmoderatedAdminRole
 unconfirmedViewerRole
Select one or more roles that can use the templatizedEmbedCode module.

embedCodeTemplate The HTML code with replacement tokens (see all available replacement tokens above in the module info)

The **Module Info** box displays the module name, description (what enabling this module allows users to do) and a list of special placeholders and the content with

which they will be replaced), and version number.

6. Configure the following:

enabled - Set to 'Yes' to enable the module. Once the module is enabled, the end user will have the ability to copy and paste the embed code defined in this module.

tabName - Type the name of the tab or menu item.

multiTemplateEmbed - Set to 'Yes' to allow multiple embed code templates to be defined. If enabled, the embed code template will be selected by the user from a drop-down list. **(Note - This option is available only for Theming users.)**

allowedRoles - Select one or more roles that can use the Templatedembedcode module.

The options are as follows:

- Owner Only
- Co-Editor
- Co-Publisher
- Specific Users / Groups
- anonymousRole
- ViewerRole
- PrivateOnlyRole
- AdminRole
- UnmoderatedAdminRole

For more information about contextual roles, visit our article [legacy Video Portal and KAF roles and permissions](#).

embedCodeTemplate - The HTML code with replacement tokens (see all available replacement tokens in the Module Info box).

showStartAt - Select 'Yes' or 'No'. When enabled, the Start At field is shown in the UI, allowing users to set a start time for the embed code. If disabled, the Start At field is hidden and the embed code will start at 0.00 by default.

showEmbedSize - Select 'Yes' or 'No'. When enabled, the Embed Size field is shown in the UI, allowing users to set the embed size for the embed code. If disabled, the Embed Size field is hidden and uses the default MediaSpace player dimensions.

embedSizes - Define sizes that can be used for embedded players. Define the player

size in the following format: {width} x {height}

Default values are as follows:

- large 608x402
- medium 400x285
- small 304x231

7. Click **Save**.

You receive a notice that your configuration for Templatedembedcode was saved and the cache was cleared.
