About

This article explains how to set up a Shared Repository in Kaltura's LMS Extensions.

The **Shared Repository**, also known as the Faculty Repository, is an institution-wide media library where educators can share and reuse media across courses.

Typically, an LMS instance has one Shared Repository. Depending on their permissions, educators can contribute media, browse and search shared content, and use media contributed by other educators.

Enable the Shared Repository

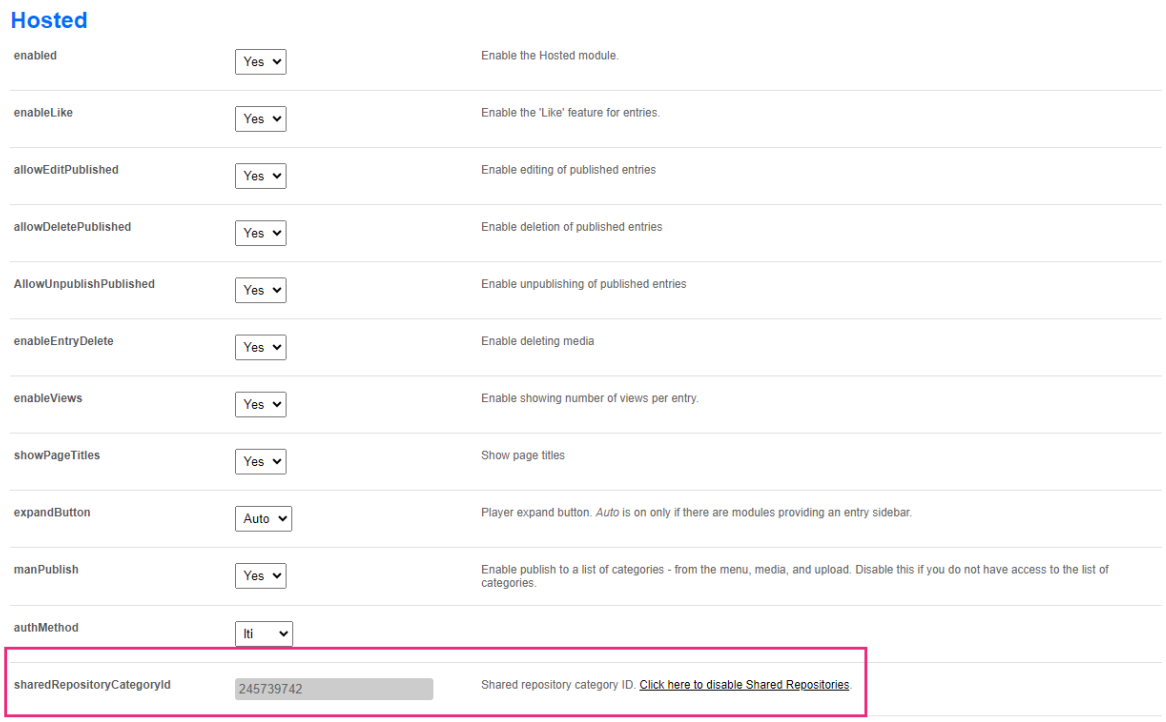

Enable the repository in the Hosted module

1. Open the **Hosted** module.
2. Ensure `manPublish` is set to 'Yes'.
3. Locate the `sharedRepositoryCategoryId` field.
4. Click **Click here to enable the Shared Repository**.
5. Click **Save**.

The system creates the Shared Repository category and automatically populates `sharedRepositoryCategoryId` with its category ID.

When the repository is enabled, the option next to the field changes to **Click here to disable Shared Repositories**.

Configure access

In the **Hosted module**, configure the LMS roles that can access the Shared Repository.

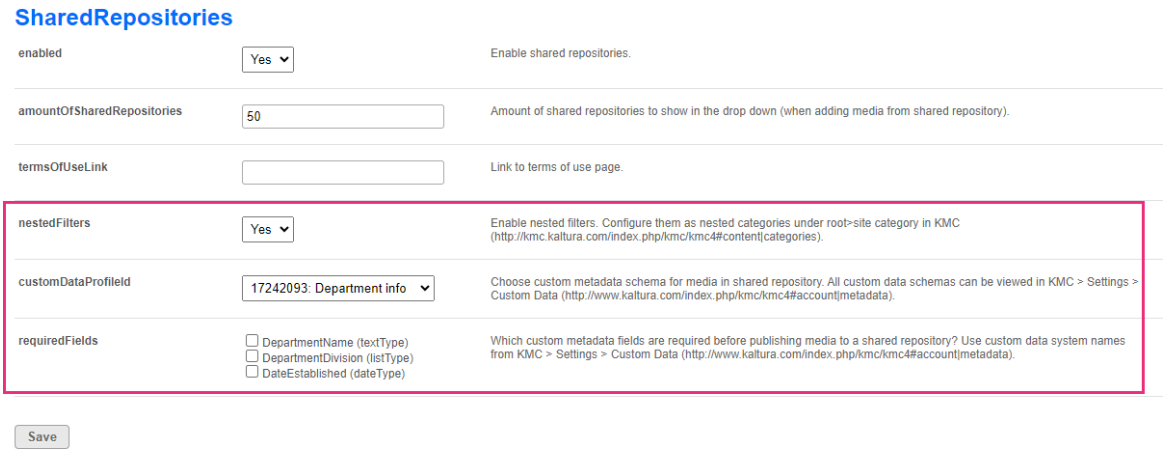

For each applicable role, set `allowSharedRepository` to 'Yes', and then click **Save**.

Users can access the Shared Repository only if their mapped LMS role has permission to use it.

Configure the Sharedrepositories module

Open the **Sharedrepositories module** and set `enabled` to 'Yes'.

For full configuration instructions, see Sharedrepositories module.

Configure the media selector

1. Open the **Theming module**.
2. Verify that `enabled` is set to `Yes`.
3. Under `features`, verify that `browseandembed` is set to `Yes`.
4. Open the **Browseandembed module**.
5. Verify that `enableNewBSEUI` is set to `v3`.
6. Click **Save** if you made any changes.

Access the Shared Repository

After the Shared Repository is configured, educators with the appropriate permissions can access it from the media selector.

When the **Select media** window opens, the **My Media** tab is displayed by default. Click the **Shared Repository** tab to access shared media.

Add content to the Shared Repository

To learn how to add media to the Shared Repository, see Add content to a shared repository.
