

# Introduction to Avatar Videos

Last Modified on 05/26/2026 3:35 pm IDT

 This article is designated for all users.

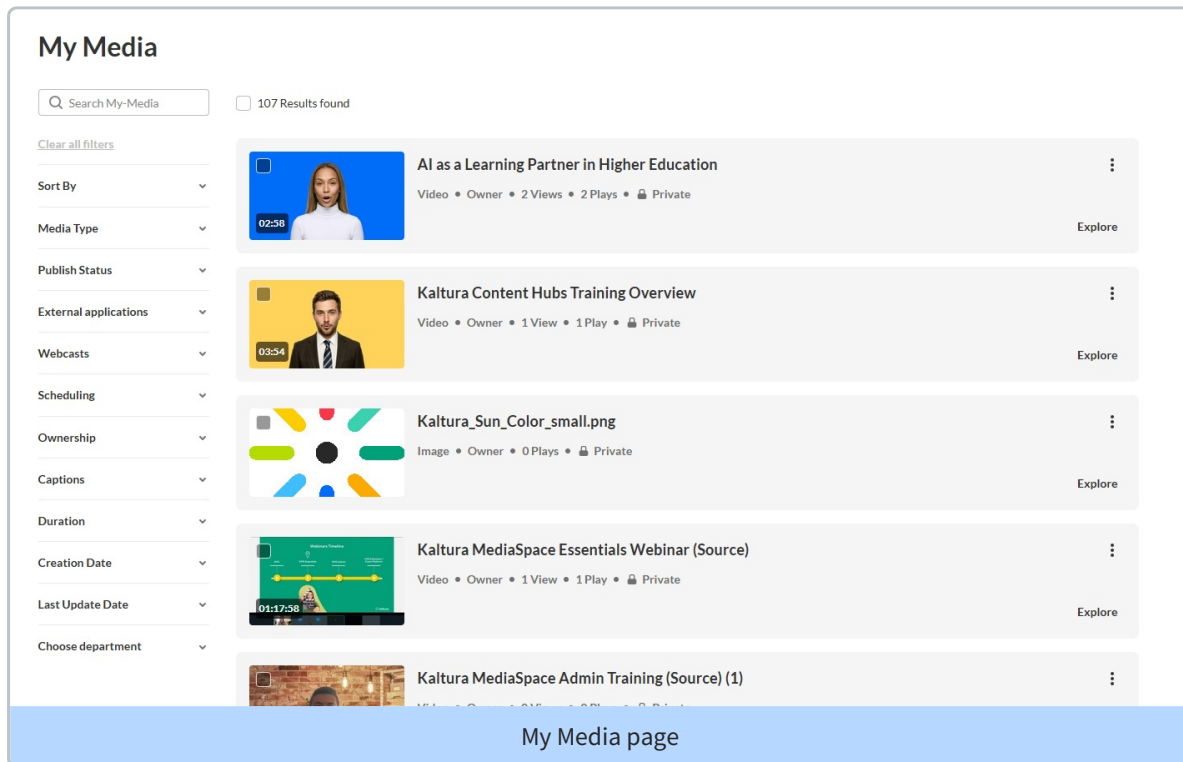

## About

With **Avatar Videos**, you can create AI-generated avatar-led videos using scripts, recordings, documents, webpages, and other media sources.

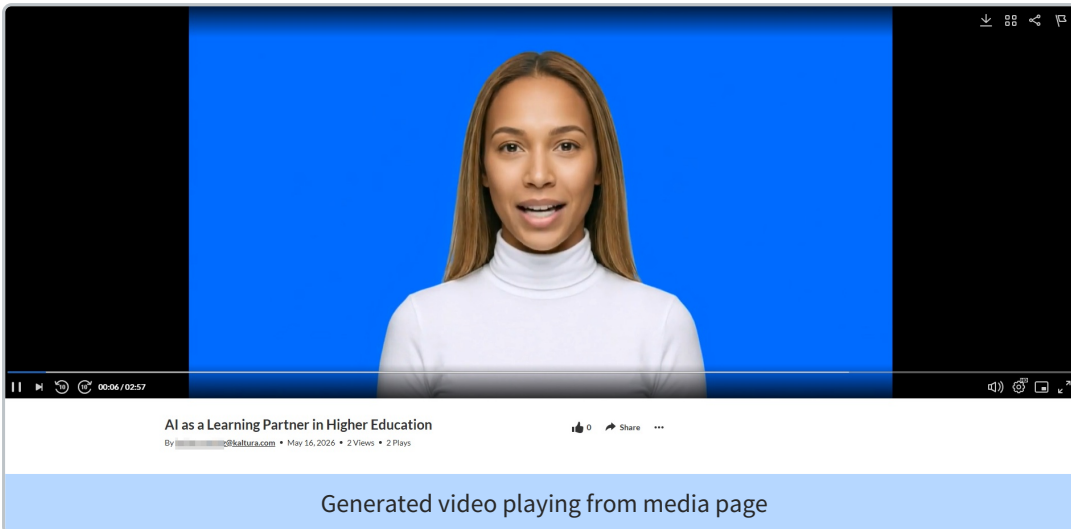

With Avatar Video, you can:

- create videos from scratch
- generate recap videos from existing recordings
- create an explainer video from videos, documents, or webpage URLs
- customize avatars and backgrounds
- preview scenes and edit script before generating the final video

Generated videos are saved in [My Media](#) in your Content Hub, and can be managed like other media in the platform.

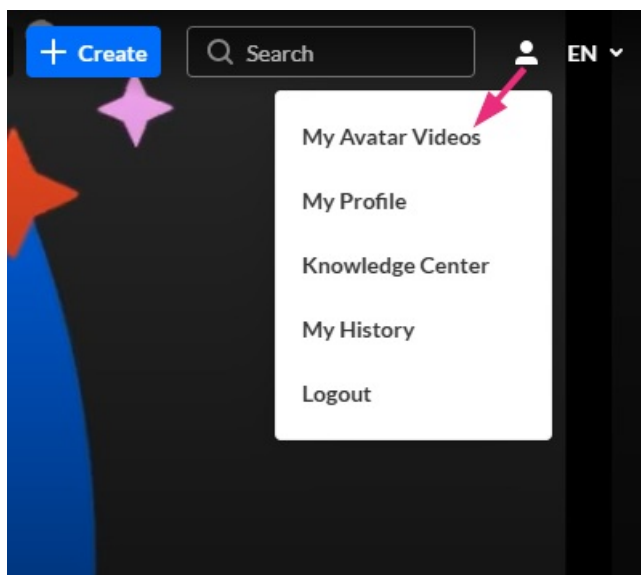

Generated avatar videos can be viewed from the media page in your Content Hub.

## Access Avatar Video Studio

You can access Avatar Video Studio from:

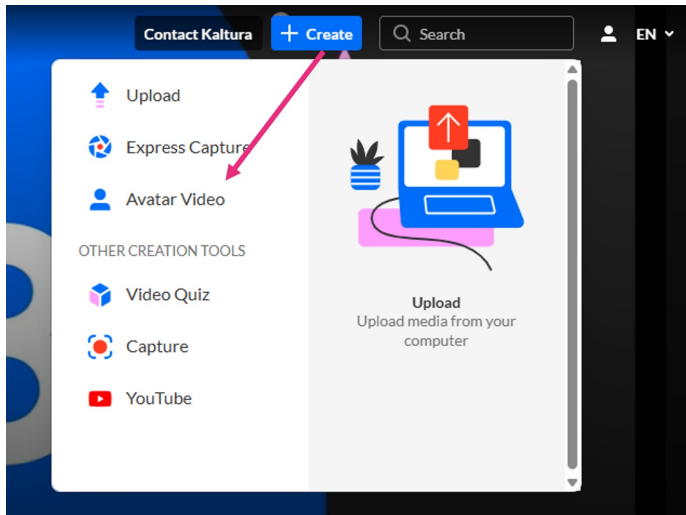

- the **user menu** by selecting **My Avatar Videos**

- the **+Create menu** by selecting **Avatar Video**

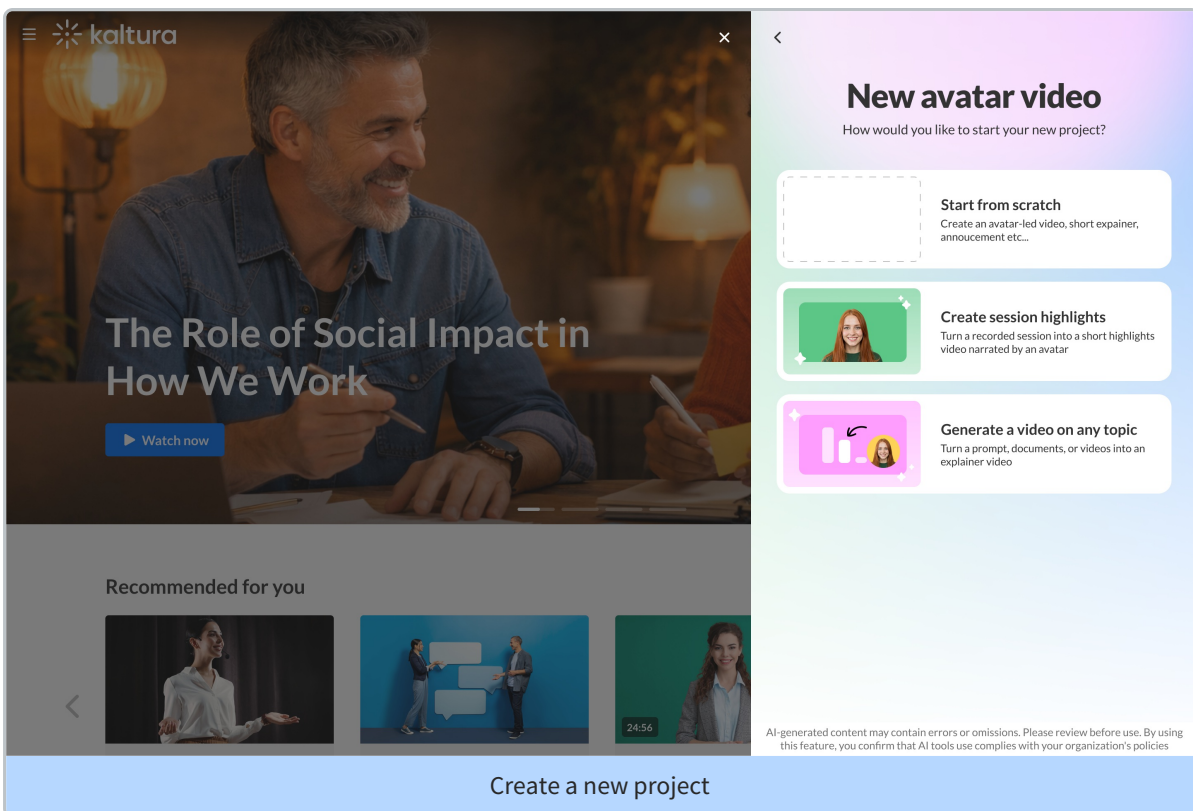

This option only appears if the site uses the [Theming header](#).

## Avatar video workflows

Avatar Video Studio supports three workflows.

### Start from scratch

Create an avatar video using your own script and media.

See [Create an avatar video from scratch](#)

### Session highlights

Generate a recap video from an existing recording. This workflow uses captions and source media to generate narration, scenes, and highlighted clips.

See [Create an avatar video from an existing recording](#)

## Explainer video

Generate an avatar video from videos, documents, webpages, or written instructions. Avatar Video Studio analyzes the selected sources and generates a draft video project automatically.

See [Generate an avatar video on any topic](#)

## Edit and manage projects

Draft and generated avatar video projects are managed from the **My Avatar Videos** page.

Generated avatar videos are also saved to [My Media](#) and can be accessed like other media entries in the platform.

## Edit projects

Edit narration, scenes, avatars, and backgrounds before generating the final video.

See [Edit Avatar Video projects](#)

## Manage background media

Add and manage supporting background media (B-roll) within scenes, including video clips selected from source content or your media library.

See [Edit source clips in avatar videos](#)

## Manage avatar video projects

Open projects, preview generated videos, download videos, and monitor generation status.

See [Manage avatar video projects](#)

## Enable Avatar Videos

To use Avatar Videos, the [Avatarvodstudio module](#) must be enabled.
