About

When you embed a player on a website or page, its dimensions have a default width and height. You can customize the default dimensions for each player using the **Default player ratio** setting in the Player Studio.

These dimensions are used when you copy an embed code from:

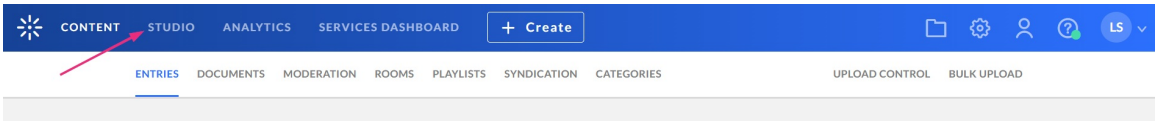

- The **Share & Embed** page in the Rich Media CMS. If you turn on **Responsive** there, the player adjusts to the page instead.
- The **Share** option inside the player, at the top right of the video.

Embed codes copied from a Content Hubs, legacy Video Portal, or LMS media page don't use the **Default player ratio**. Their sizes are set in the Embed module. For more information, see Introduction to embedding Kaltura media.

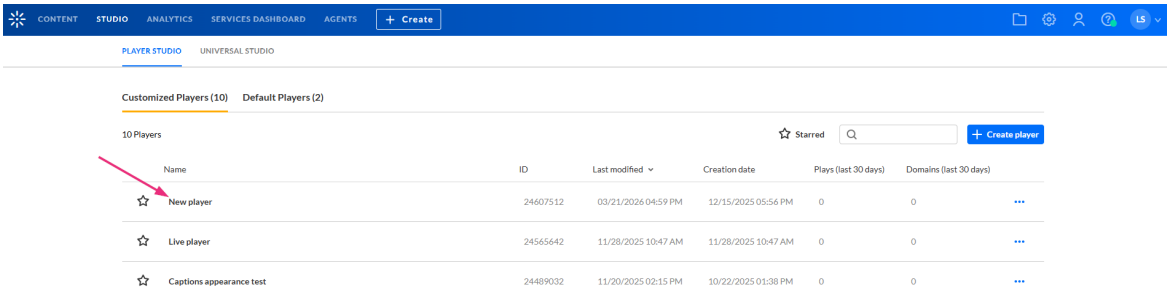

VOD AUDIO REELS

Access the Visual settings

1. Log into your Rich Media CMS and click the **Studio** tab.

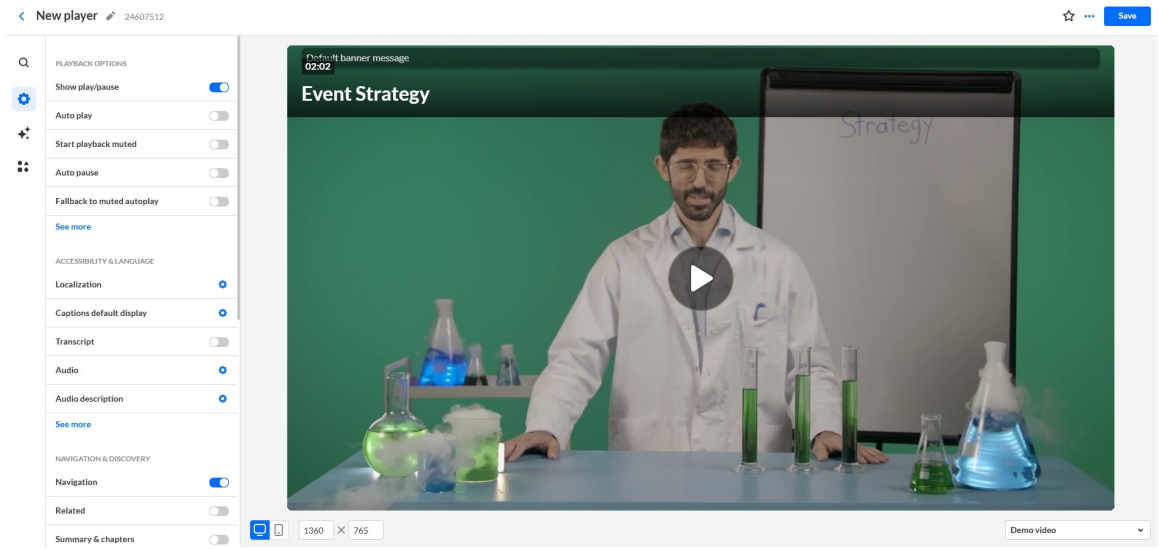

2. From the list, select the player you want to configure.

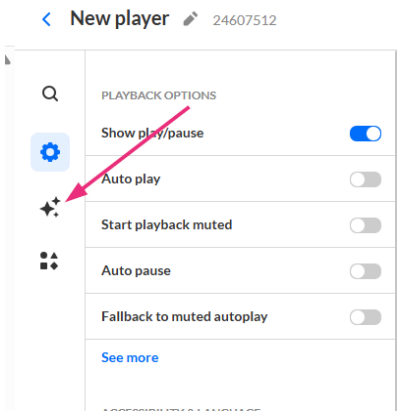

The settings tab opens.
