

# Add a custom logo to a player

Last Modified on 06/07/2026 4:02 pm IDT

 This article is designated for administrators.

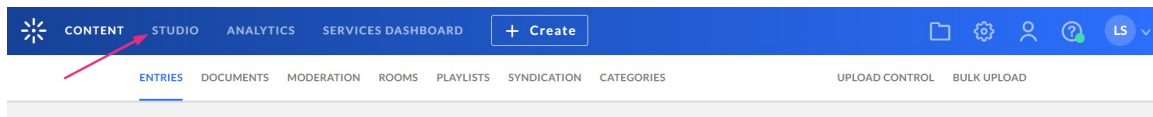

## About

Use the **Logo** setting to display a custom logo in the player control bar.

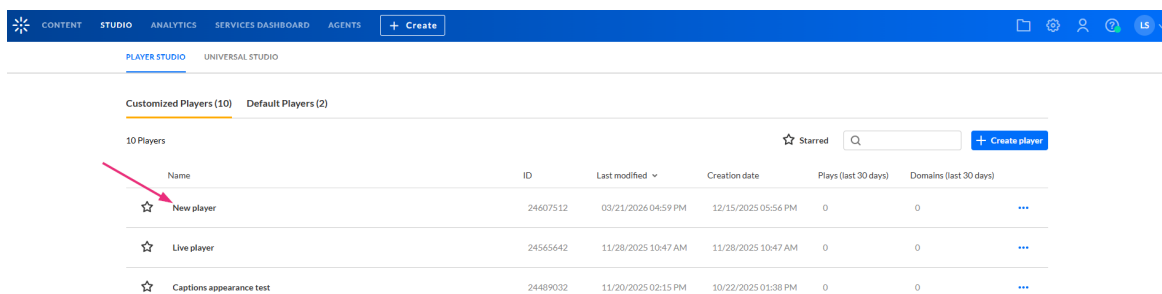

This setting is available for video players.

## Access the Visual settings

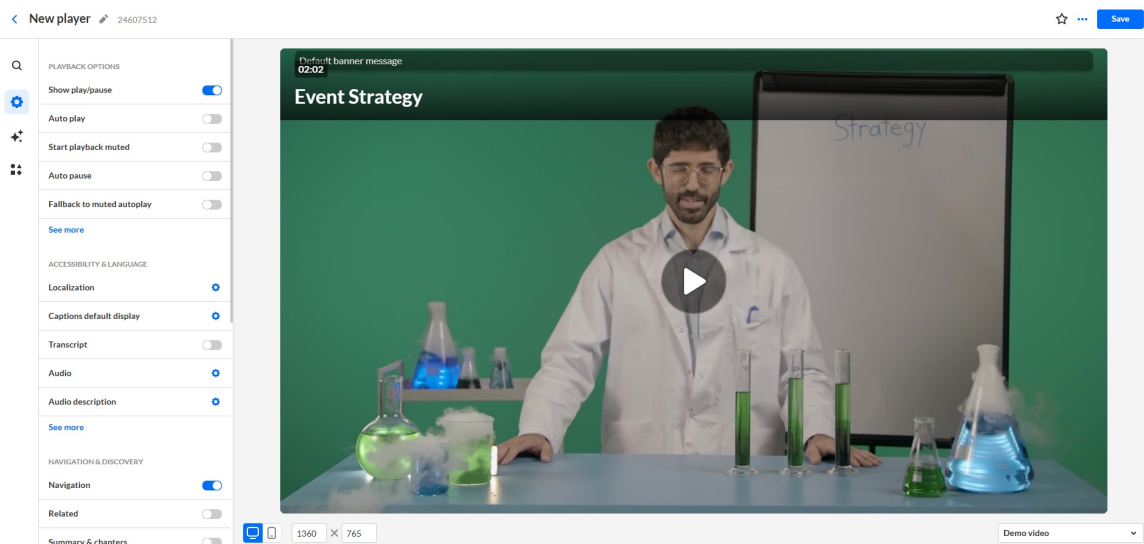

1. Log into your Rich Media CMS and click the **Studio** tab.

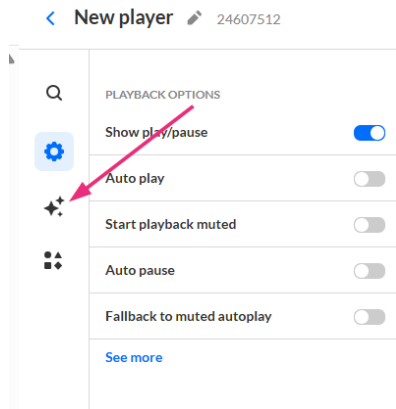

2. From the list, select the player you want to configure.

The settings tab opens.

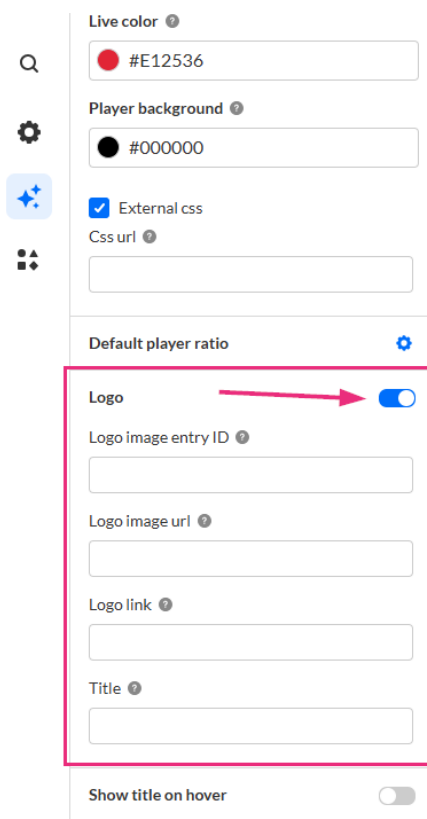

3. Click the **stars icon**.

The visual settings display.

## Add a logo

1. Scroll down to **Logo** and click the toggle to open the settings

2. Configure the following:

- **Logo image entry ID** - Enter the entry ID of the image to use as the logo.
- The player uses the entry thumbnail as the logo image.

If both a Logo image entry ID and Logo image URL are provided, the player uses the Logo image entry ID. If the entry ID can't be resolved, the player uses the Logo image URL. If no URL is provided, no logo is displayed.

- **Logo image URL** - Enter the URL of the image to display in the player control bar.

The recommended image size is 32 x 32 pixels.

- **Logo link** - Enter the URL users are directed to when they click the logo.

You can configure either of the following:

- **Click-through URL** - A fixed destination URL.
- **Dynamic logo URL** - A URL that changes based on the video being played.

For example: `https://mycompanymediaspace.com/media/{entryId}`

The `{entryId}` placeholder is replaced with the ID of the current entry.

- **Title** - Enter the text displayed when users hover over the logo.

3. Click **Save** at the top right of the settings page.

For the user guide, see [Logo plugin](#).
