

Grant camera and microphone permissions for Capture on macOS

Last Modified on 07/10/2026 12:29 pm IDT

 This article is designated for all users.

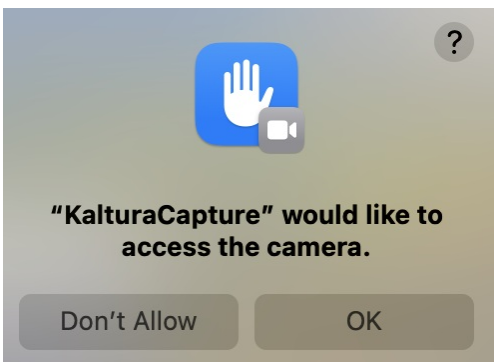

About

This article explains how to allow Capture to access your camera and microphone on **macOS**.

You might need to enable these permissions if Capture can't detect your camera or microphone, or if you receive recording-related error messages.

Allow camera and microphone access

The first time you open Capture, macOS prompts you to allow access to your camera and microphone.

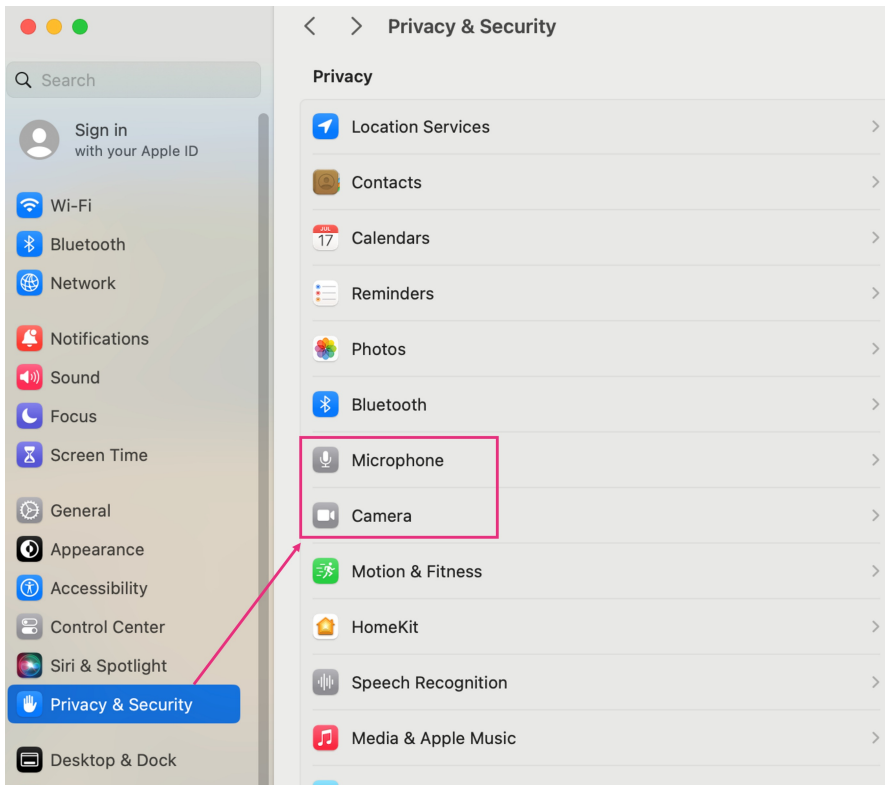

Click **OK**.

Capture can now access your camera and microphone.

Enable permissions manually

If you didn't grant permission when prompted, you can enable access manually.

Enable camera access

1. Open **System Settings**.
2. Select **Privacy & Security**.
3. Select **Camera**.
4. Make sure **KalturaCapture** is enabled.

Enable microphone access

1. Open **System Settings**.
2. Select **Privacy & Security**.
3. Select **Microphone**.
4. Make sure **KalturaCapture** is enabled.

If Capture is running, quit and reopen the application after changing these settings.
