

Review media processed by an agent in a channel

Content updated: 08/01/2026

 This article is designated for all users.

About

Channel owners and managers can review the activity of an assigned workflow agent to see which media items it has processed.

- This feature requires the [Agents module](#) to be enabled and configured for the appropriate user roles.
- You must be a channel owner or manager.

Access the Agents tab

1. Open the edit page for the channel you want to manage. See [Edit a channel](#) if you need guidance.
2. On the edit page, select **Agents** in the left panel.

The screenshot shows the Kaltura interface. On the left is a sidebar with a list of options: Technology, Manage content, Content moderation, Channel playlists, Roles & permissions, Subscribers, Meeting Room, Details, Agents, Branding, and Settings & layout. The 'Agents' option is highlighted with a red box and a red arrow points to it. The main content area is titled 'Agents' and contains the text 'Manage the AI agents that help automate content creation, enrichment, and publishing workflows.' Below this text is a card for 'My new workflow' which is 'Enabled' and has '1 action'. The card has an 'Activity' button and an 'Assign' button.

The **Agents** page displays.

Review agent activity

On the **Agents** page, click **Activity** next to the agent you want to review.

The **Activity** window opens.

The Activity window shows the processing status for media that has been processed by assigned workflows.

From here, you can:

- Search for a media entry.
- Filter activity by creation date or processing status (*Queued*, *Success*, or *Error*).
- Click the **Refresh icon** to display the latest processing results.
- If a media item has multiple processing actions under the selected agent, you can expand the media item to view the status of each action. Each expanded row shows the action name and its status.

Administrators can monitor workflow activity across the organization from the

Activity tab in the Rich Media CMS. For more information, see [View workflow activity](#).
