

Themingcategory module

Last Modified on 08/03/2026 3:52 pm IDT

 This article is designated for administrators.

About

The **Themingcategory module** lets administrators create player sets that channel, gallery, and media gallery owners can assign to their content, enabling different branding, language settings, and playback experiences for different audiences.

When a player set is assigned, media plays using the configured players instead of the site's default players.

 This module replaces the legacy **Channeltheme** and **Categorytheme** modules for Theming-based channels, galleries, and media galleries.

Configure

1. Go to your Configuration Management console, and click on the **Themingcategory** module. You can also navigate directly using a link: https://{your_site_URL}/admin/config/tab/themingcategory.

Themingcategory

Search Configuration

Module Info

Description

Enable the Themingcategory Module to allow category owners and managers to specify a custom player for all media played within their category.

Note

This is a KMS and KAF module.

enabled

Yes

Enable the Themingcategory module.

playerSet

Create sets of players. Channel managers will be able to select a player set from the Channel Settings tab to use for all the channel's media. A player set contains a list of players, one for each type of media. Media with no player will use the default media player.

+ Add "playerSet"

Save

2. Configure the following:

enabled - Set to 'Yes' to enable the module.

Player set

Create one or more player sets that channel, gallery, and media gallery owners can assign to their content.

Each player set assigns a player to supported media types, such as video, audio, and quizzes. Owners and managers can then select the appropriate player set from the **Settings & layout tab** on the edit page.

a. Click **+Add "playerset"**.

An additional field displays.

playerSet

Create sets of players. Channel managers will be able to select a player set from the Channel Settings tab to use for all the channel's media. A player set contains a list of players, one for each type of media. Media with no player will use the default media player.

+ Add "playerSet"

b. **playerSetName** - Enter a name for the player set.

c. Click **+Add "player"**.

playerSet

Create sets of players. Channel managers will be able to select a player set from the Channel Settings tab to use for all the channel's media.
A player set contains a list of players, one for each type of media. Media with no player will use the default media player.

playerSetName Player Set Name DELETE

player + Add "player"

+ Add "playerSet"

An additional field displays.

d. **entrytype** - Select the media type to associate with a player.

playerSet

Create sets of players. Channel managers will be able to select a player set from the Channel Settings tab to use for all the channel's media.
A player set contains a list of players, one for each type of media. Media with no player will use the default media player.

playerSetName Player Set Name DELETE

player DELETE

entryType Video + Add "player"

playerid + Add "playerSet"

The available options depend on your Kaltura configuration and may include the following supported entry types:

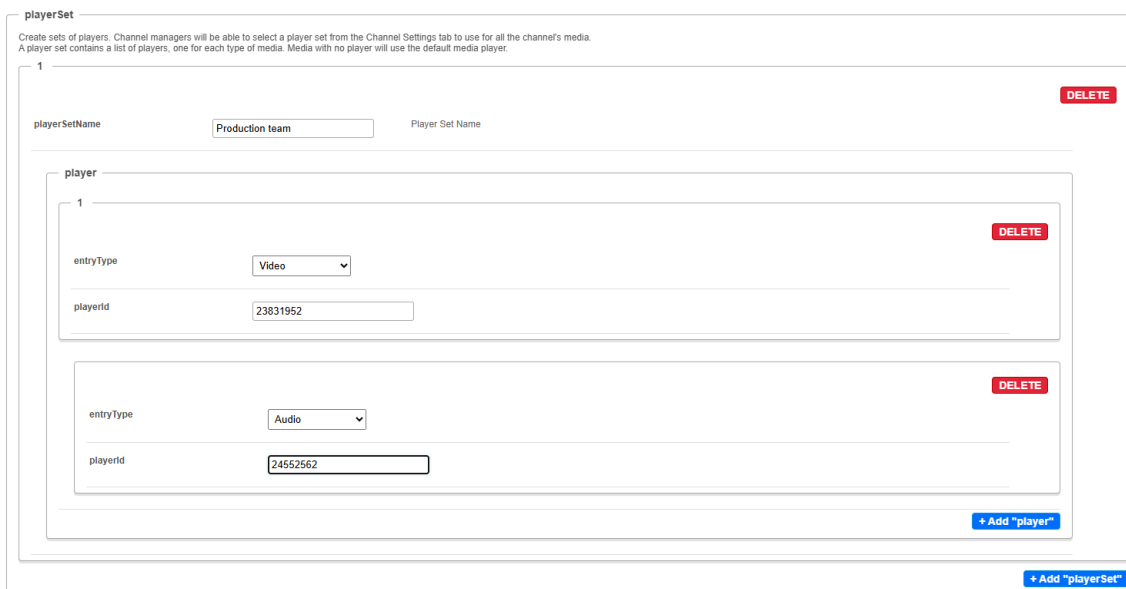

- Video
- Quiz
- Audio
- Playlists
- Document
- Draft
- Image
- Webcast/Live
- Meeting
- Interactive video
- YouTube

A player set contains one player mapping per media type, such as an audio

player for audio content and a video player for video content. When media is opened, the system automatically uses the appropriate player. If you don't configure a player for a particular media type, the default player is used.

e. **playerID** - Enter the ID of the player to use for the selected media type.

playerSet

Create sets of players. Channel managers will be able to select a player set from the Channel Settings tab to use for all the channel's media. A player set contains a list of players, one for each type of media. Media with no player will use the default media player.
