Configure camera settings in Lecture Capture

Content updated: 09/21/2026

This article is designated for all users.

About

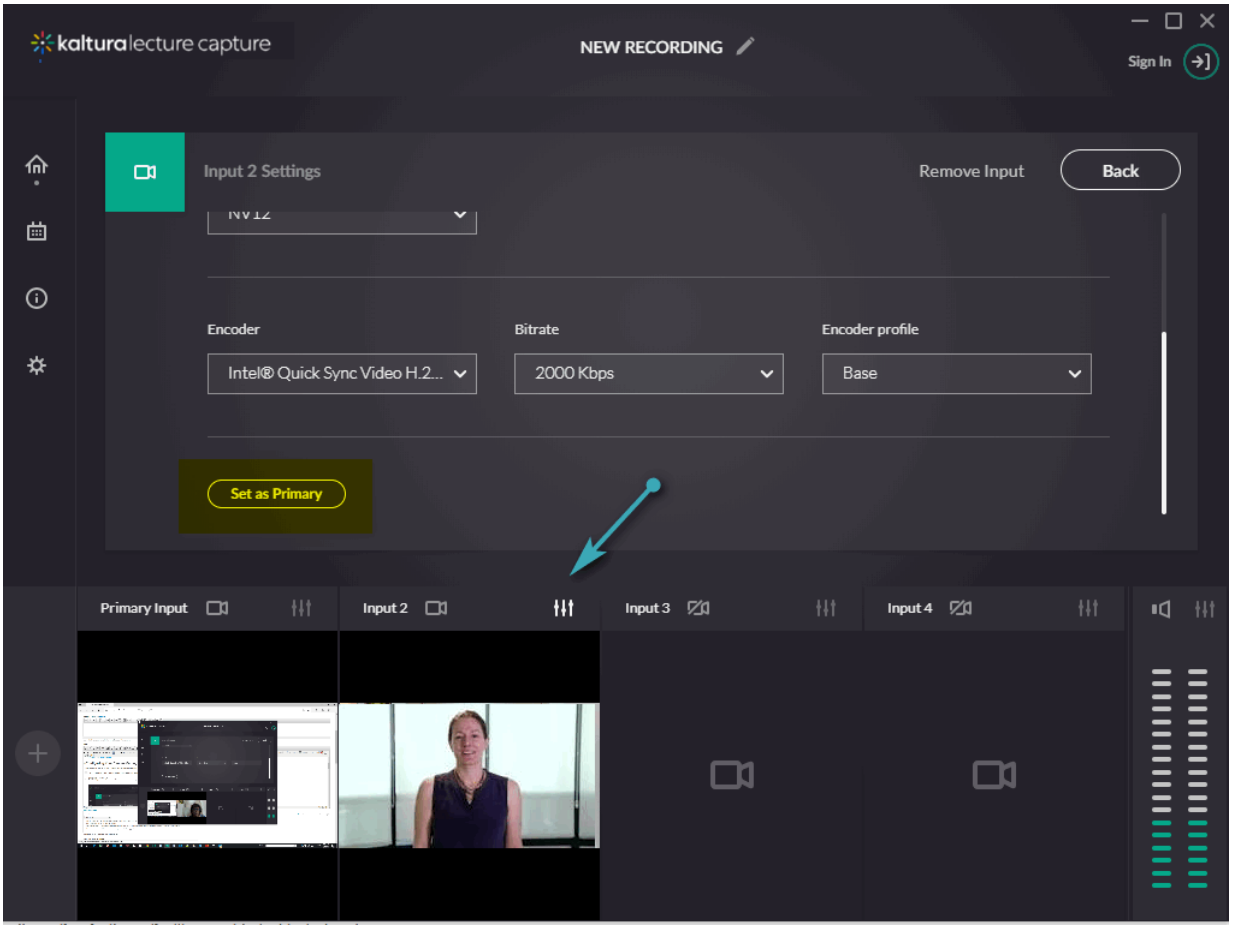

Lecture Capture automatically uses the highest available camera quality by default. You can select a different camera and adjust settings such as resolution, frame rate, encoder, and bitrate before you start recording.

Configure camera settings

You can’t change camera settings during a recording. Configure your camera before you start recording.

1. Click the **settings** icon.
2. Scroll down and select **Set as Primary**.

3. From the input source dropdown, select the camera you want to use.
4. Lecture Capture automatically selects the optimal camera settings. Change any of the following settings as needed:
   - **Resolution** - Select the recording resolution. A higher resolution provides higher recording quality and produces a larger file.
   - **FPS** - Select the number of frames per second. We recommend 30 FPS. A lower frame rate can cause fast movement to appear blurred.
   - **Color Space** - Select the color space for the video.
   - **Encoder** - Select the encoder.
   - **Bitrate** - Select the bitrate.
   - **Encoder Profile** - Select **High**, **Main**, or **Baseline**.
5. Review your changes in the preview window.
6. Click **Back** to return to the main recording window.
