

Webapp module

Content updated: 09/30/2026

 This article is designated for administrators.

About

With the **Webapp module**, users can install your Content Hubs site as a **progressive web app (PWA)** on their phone, tablet, or computer, with no app store needed.

The app opens the Content Hubs site in its own window, instead of a browser tab, and login and permissions work the same as in a browser.

After you enable the module, a banner appears at the top of your site with installation options.

- To see how users install the app on different devices, see [Install the Content Hubs app on your device](#).
- For supported devices and browser versions, see [Supported browsers and devices for the Content Hubs app](#).

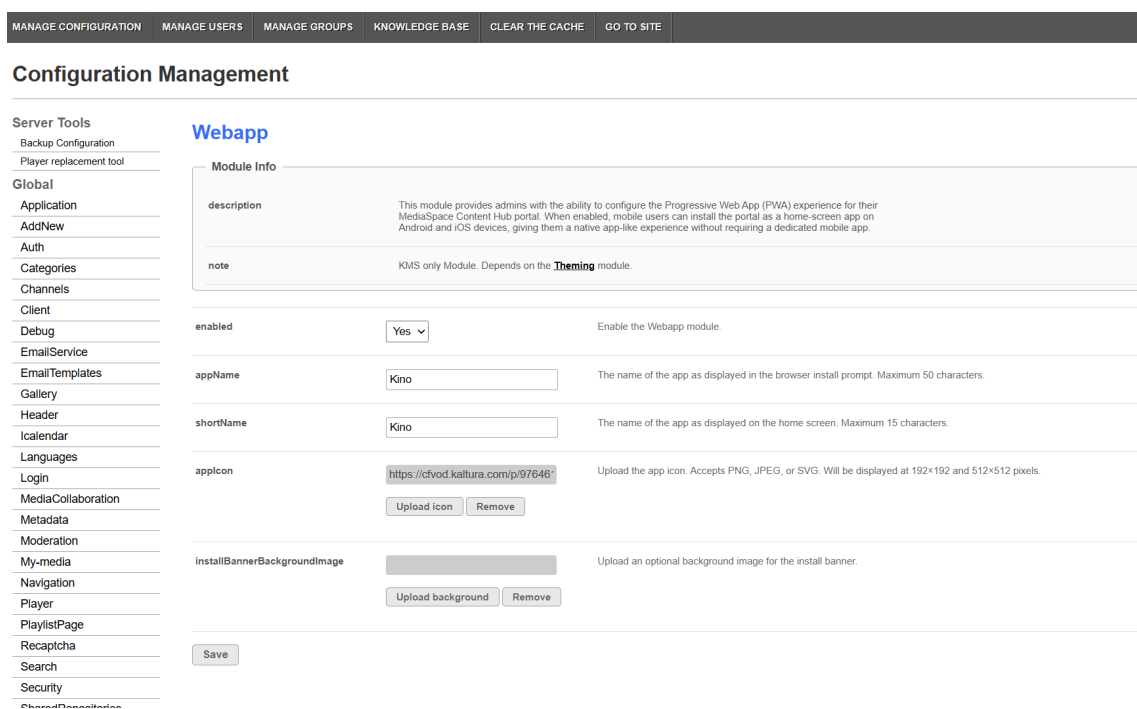

Before you start

- The Webapp module is a custom module. To add it to your site, contact your Kaltura representative.
- Theming must be enabled on your site.

Configure the module

1. In the Configuration Management console, click **Webapp** in the left panel. You can also open the module directly at: `https://{your_site_url}/admin/config/tab/webapp`.

The Webapp page displays.

The screenshot shows the Kaltura Configuration Management console. At the top, there's a navigation bar with links: MANAGE CONFIGURATION, MANAGE USERS, MANAGE GROUPS, KNOWLEDGE BASE, CLEAR THE CACHE, and GO TO SITE. Below this, the 'Configuration Management' section is active. On the left, a sidebar lists various configuration categories like Server Tools, Global, Application, Auth, etc. The 'Webapp' module is selected and highlighted in blue. The main content area shows the 'Module Info' for 'Webapp'. It includes a description: 'This module provides admins with the ability to configure the Progressive Web App (PWA) experience for their MediaSpace Content Hub portal. When enabled, mobile users can install the portal as a home-screen app on Android and iOS devices, giving them a native app-like experience without requiring a dedicated mobile app.' and a note: 'KMS only Module. Depends on the Theming module.' Below this, there are configuration fields: 'enabled' (set to 'Yes'), 'appName' (set to 'Kino'), 'shortName' (set to 'Kino'), 'appIcon' (with a URL 'https://cdn.kaltura.com/p/97646' and 'Upload icon'/'Remove' buttons), and 'installBannerBackgroundImage' (with 'Upload background'/'Remove' buttons). A 'Save' button is at the bottom left.

2. Configure the following:
 - **enabled** - Set to **Yes** to enable the module.
 - **appName** - Enter the name of the app, up to 50 characters. This name appears in the browser's install prompt.
 - **shortName** - Enter a shorter version of the name, up to 15 characters. This name appears under the app icon on the home screen.
 - **appIcon** - Click **Upload icon** and select your icon file. The icon is resized automatically to 192 × 192 and 512 × 512 pixels for different devices. To remove the icon, click **Remove**.

If the file can't be processed, the message *Image could not be processed. Please upload a valid PNG, JPEG, or SVG file.* appears. If the upload fails, your previous icon stays in use, and you can try again.

- **installBannerBackgroundImage** - (Optional) Click **Upload background** and select an image for the install banner that appears on computers. The image replaces the banner's default blue background. To remove the image, click **Remove**.

3. Click **Save**.

Change the app name or icon

You can change the app name or icon at any time. Changes can take up to one hour to reach users.

On devices where the app is already installed, the new name and icon can take longer to appear, depending on the device.

Turn off the install banners

1. In the **Webapp** module, set **enabled** to **No**.
2. Click **Save**.

The install banners and popups no longer appear to any user on your site.
