

Introduction to embedding Kaltura media

Content updated: 10/05/2026

 This article is designated for administrators.

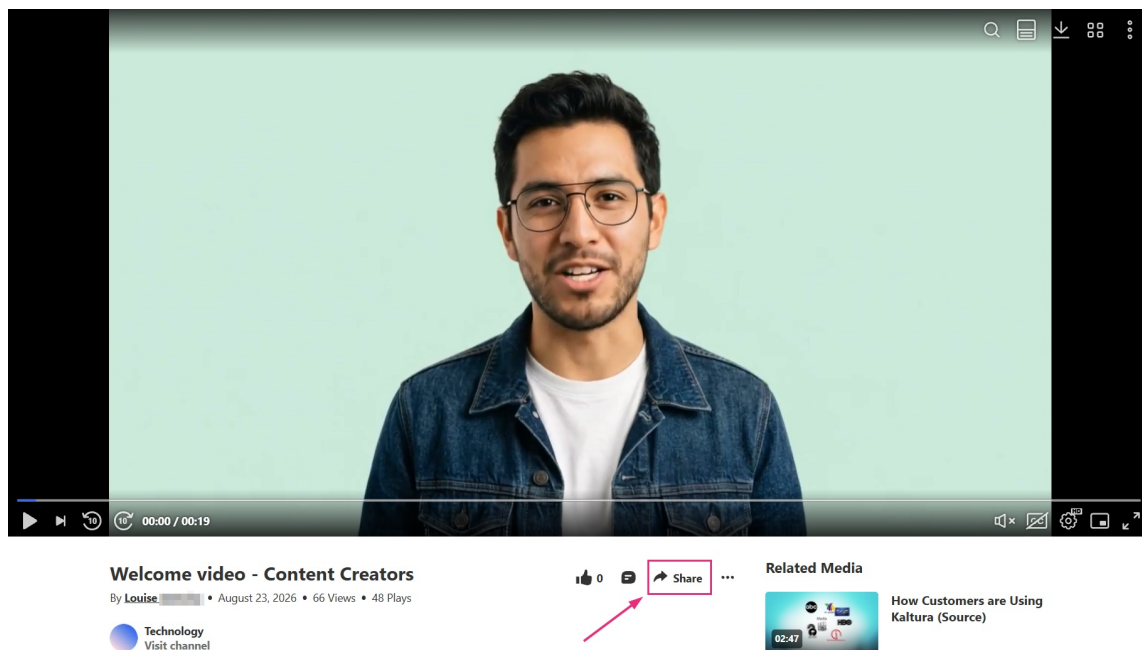

About

Embedding lets you place Kaltura media on another website or page, using an embed code.

Where you get the embed code depends on where you work: **Content Hubs**, **legacy Video Portal**, the **player**, the **Rich Media CMS**, or your **LMS**.

Embed from Content Hubs

On the media page, the embed code is under **Share**.

Click the **Share** button under the player, then click the embed icon. You choose a player from the **Choose player** menu and a size from the **Max embed size** menu. Your administrator defines the available sizes in the Embed module.

If your site uses secure embed, viewers must log in before the embedded media plays.

- For instructions, see [Embed media in Content Hubs](#) or [Share and embed media in legacy Video Portal](#).
- For admin settings, see [Share module](#) and [Embed module](#).

Embed from the player

If the **Share & embed** plugin is enabled on the player, viewers can get an embed code from the **Share** option in the player.

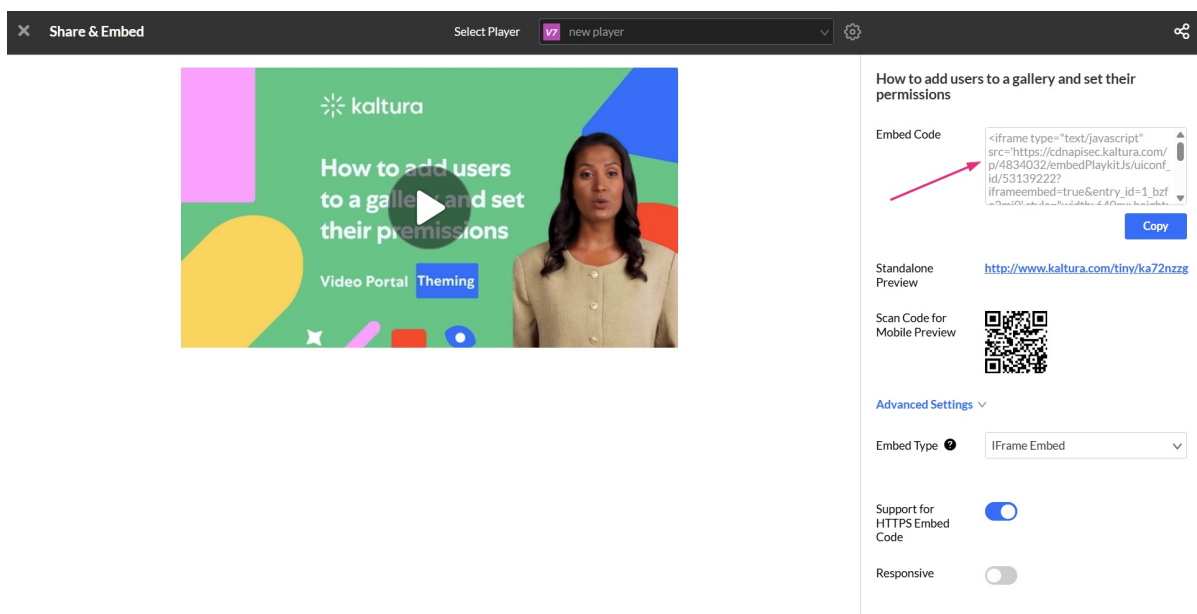

The embed code uses the width and height set in the player's **Default player ratio** in the [Player Studio](#). Viewers can also start the video at a specific time or embed a clip.

- For instructions, see [Share and embed plugin](#).
- For admin settings, see [Enable sharing and embedding in the player](#).

Embed from the Rich Media CMS

Admins can get an embed code for any media entry from the **Share & Embed** page in the Rich Media CMS.

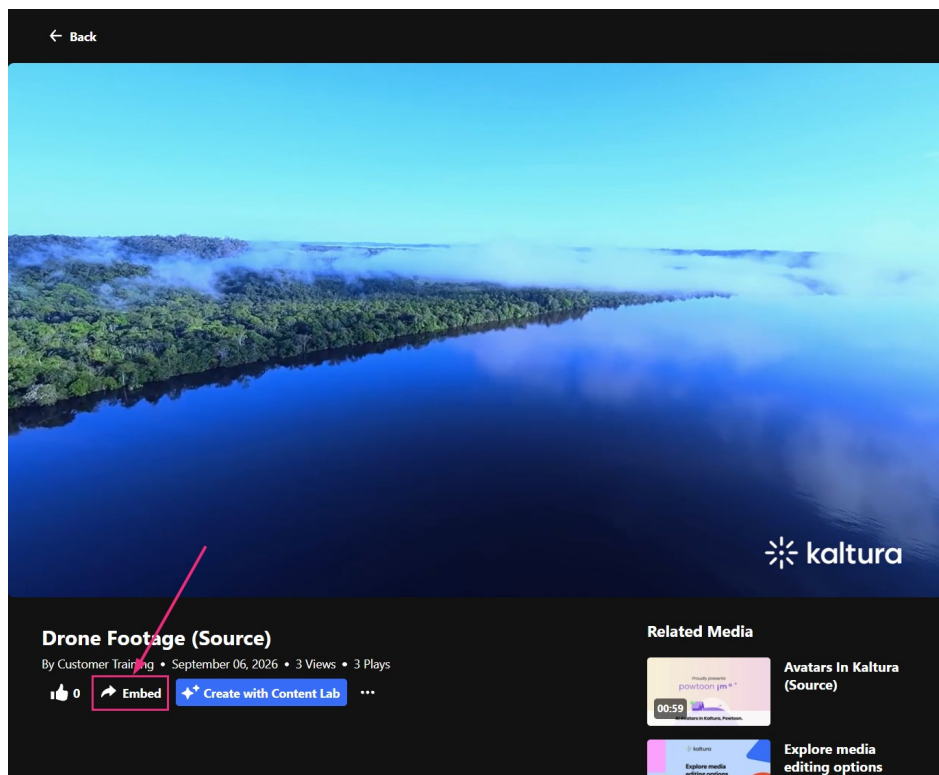

Unless **Responsive** is on, the embed code uses the width and height set in the player's **Default player ratio** in the [Player Studio](#).

- For instructions, see [Share and embed media in Rich Media CMS](#).
- To set the default size, see [Set default dimensions for embedded players](#).

Embed from your LMS

In an LMS such as Canvas, Blackboard, Brightspace, Moodle, or Sakai, click the **Embed** button under the player on the media page.

The **Embed** window works the same way as in Content Hubs: you choose a player from the **Choose player** menu and a size from the **Max embed size** menu. Your administrator defines the available players and sizes in the Embed module.

To add Kaltura media directly to course content, such as an assignment or a discussion, you don't need an embed code. Use the **Embed Kaltura Media** window in your LMS's rich-text editor instead. For instructions, see the article for your LMS: [Canvas](#), [Blackboard](#), [Brightspace](#), [Moodle](#), or [Sakai](#).

- For admin settings, see [Share module](#) and [Embed module](#).
