

Embed media in Content Hubs

Content updated: 10/06/2026

 This article is designated for all users.

About

Embedding lets you place media from your Content Hubs site on another website or page, using an embed code. Embedding works in one of two ways, depending on how your administrator set it up:

- **Regular embed:** Viewers can watch the video without logging in or having special permissions.
- **Secure embed:** Viewers might be asked to log in, and only authorized users can watch the video. Your administrator manages these settings in the [Embed module](#).

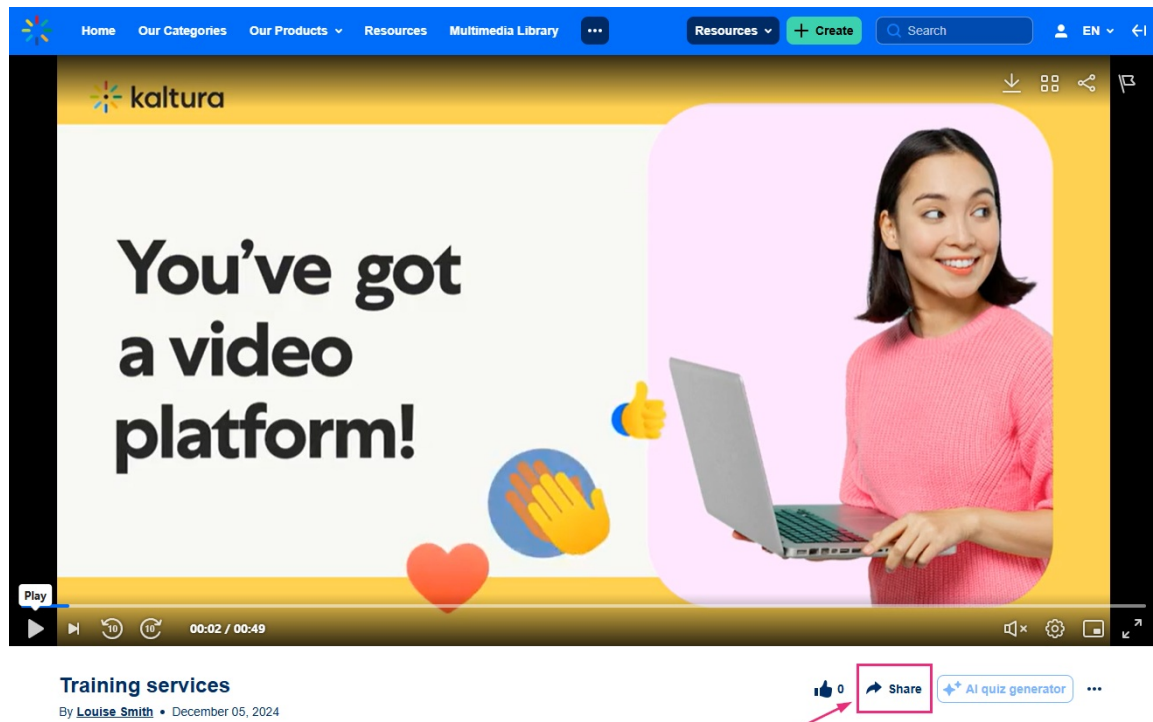

- You need permission to embed media.
- This feature requires the [Theming module](#) to be enabled, with the 'mediapage' feature set to 'Yes'.
- This feature requires the [Share module](#) and the [Embed module](#) to be enabled.
- To use Kaltura videos with H5P Interactive Video, you need a direct video file URL (for example, an MP4 or streaming URL), not the iframe embed code. To generate video URLs in different formats, see [playManifest API](#).

For all the places you can get an embed code, see [Introduction to embedding Kaltura media](#). For information about embedding playlists, see [Share and embed playlists](#).

Get an embed code from the media page

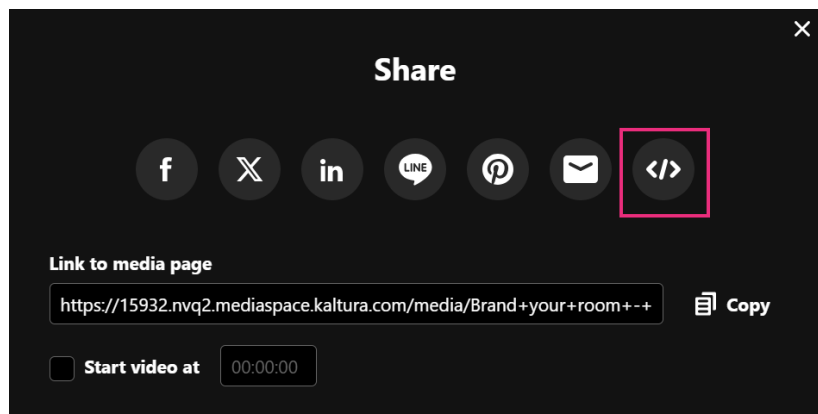

1. Go to the media page of the media you want to embed.
2. Click **Share** under the player.

The **Share** window opens.

3. Click the **embed** icon.

⚠ If you don't see this option, contact your administrator.

The **Embed** window opens.

Embed

Embed code

```
<iframe id="kmseembed-1_m5hkp8r"
width="608" height="402"
src="https://4834032.mediaspace.kaltura.com/em
bed/secure/iframe/entryId/1_m5hkp8r/uiConfId/5
```

Choose player

Marketing

Max embed size

608x402

☐ Start video at

Close

Copy embed

- Select a player from the **Choose player** menu.

Embed code

```
<iframe id="kaltura_player" type="text/javascript"
src='https://api.nvq2.ovp.kaltura.com/p/15932/e
mbedPlaykitJs/uiconf_id/23831962?
iframeembed=true&entry_id=0_0bvlo0se&config[
```

Choose player

Embed player

Max embed size

Responsive size

☐ Start video at

- Select a size from the **Max embed size** menu.

If your administrator enabled it, the menu includes **Responsive size**. A responsive embed adjusts to the size of its container, so the video scales with the page layout.

Embed code

```
<iframe id="kaltura_player" type="text/javascript"
src="https://api.nvq2.ovp.kaltura.com/p/15932/e
mbedPlaykitJs/ui/conf_id/23831962?
iframeembed=true&entry_id=0_0bvlo0se&config[
```

Choose player

Embed player

Max embed size

Responsive size

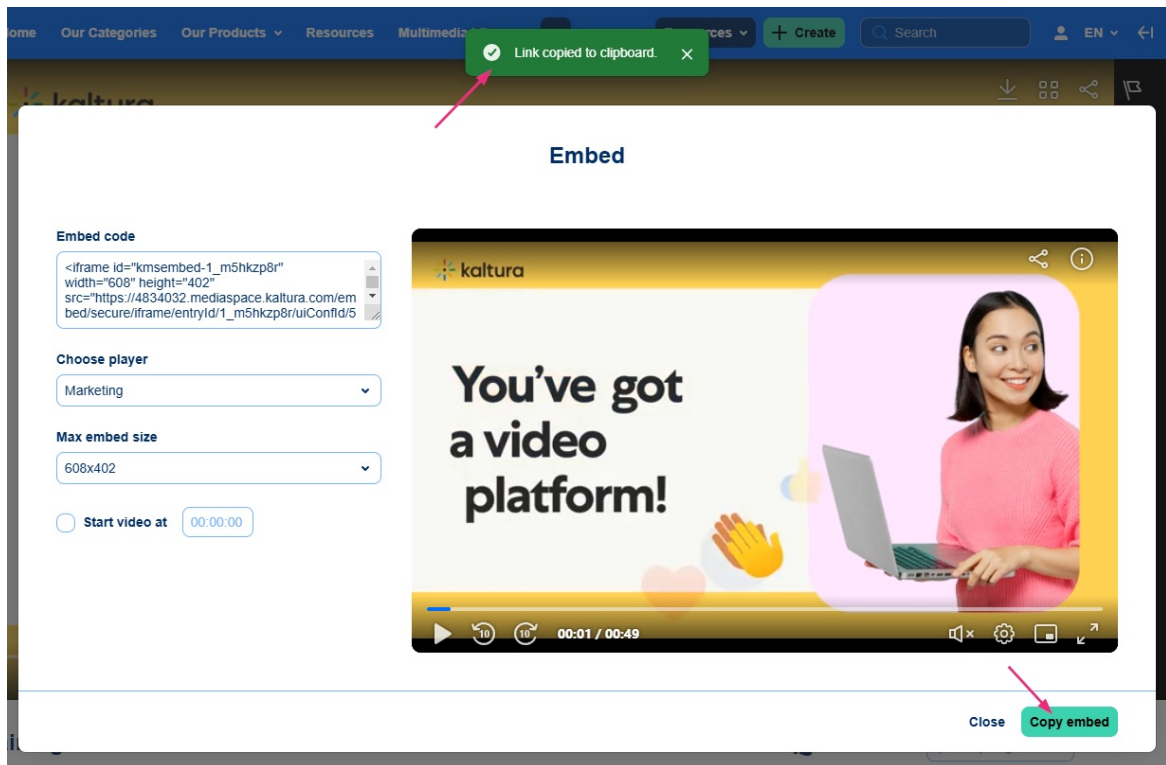

Responsive size

608x402

400x285

304x231

6. (Optional) To start the video at a specific point, select the **Start video at** checkbox, and enter the time in the format given (`00:00:00`). For example, to start the video at 1 minute and 30 seconds, enter `00:01:30` .
7. Click **Copy embed**.

The message *Link copied to clipboard* appears at the top of the screen.

8. Click **Close**, and paste the embed code where you want to embed the video.

You can also embed Kaltura media using a `referenceld` , but you must also include the `entryId` or the `widgetId` .

Get an embed code from the player

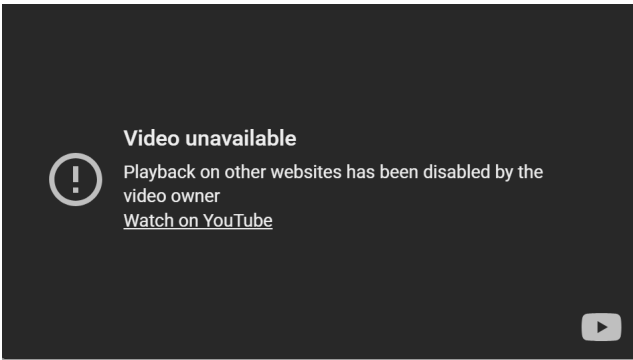

If your player is set up for sharing, you can also get an embed code from **Share** in the player, wherever the player appears. For instructions, see [Share and embed plugin](#).

Troubleshoot YouTube embeds

If you add a YouTube video and see an error, the video owner might have disabled embedding on other websites. To check, open the video on YouTube, select **Share**, and then select **Embed**.

If you see a message such as *Video unavailable: Playback on other websites has been disabled by the video owner*, the video can't be embedded or played in Kaltura.

If a video worked before, the video owner might have changed its privacy or embed settings.

Video unavailable
Playback on other websites has been disabled by the video owner
