

Landing Page Share - Admin Guide

Content updated: 10/09/2026

 This article is designated for administrators.

About

The Landingpageshare module allows users to share media content to external users. The sections herein will guide you through enabling and configuring the landingpageshare module.

 This module is for both Content Hubs and legacy Video Portal users.

 For technical support, contact Kaltura Customer Care. For all other inquiries, reach out to your Customer Success Manager.

Prerequisites

The [Admin Embed module](#) must be enabled and configured on your account.

Configure the Landing Page Share module

1. Access your Configuration Management console.

The screenshot shows the Configuration Management console with a sidebar on the left containing a list of configuration categories: Developer Tools, Global, Application (selected), Auth, Categories, Channels, Client, Debug, Gallery, Header, Languages, Metadata, Moderation, Navigation, Player, Security, SharedRepositories, Widgets, Search, and MediaCollaboration. The main content area is titled 'Configuration Management' and includes a search bar. Below the search bar, there is a table of configuration settings for the 'Application' section. The table has three columns: the setting name, its current value, and a description. The settings include instancelid, privacyContext, userRoleProfile, title, footer, forceIECompatibilityMode, and theme.

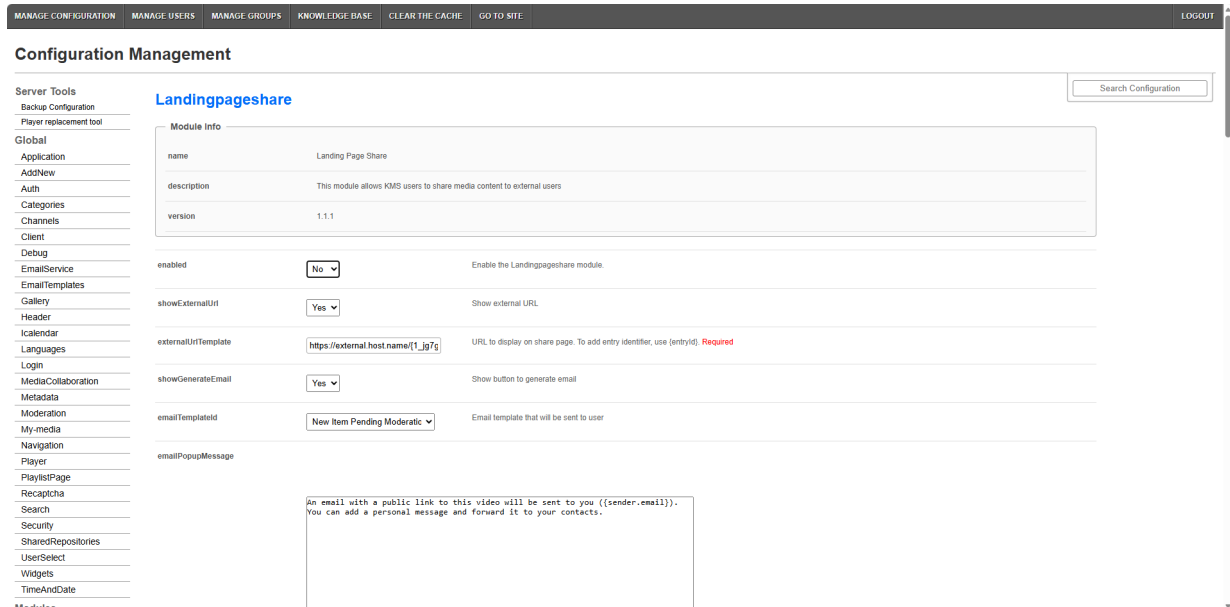

Setting	Value	Description
instancelid	1756361.mediaspace.kaltura.com	Unique string to identify that installation of mediaspace. This value can be set during installation only.
privacyContext	MediaSpace	String used to be set as privacy context on root category. This value can be set during installation only.
userRoleProfile	3503841	Metadata Profile ID for user's role per KMS installation instance
title	Kaltura MediaSpace	What is your MediaSpace website title? The website title is displayed in the browser's title bar and usually is displayed in search engine results. Page titles consist of the name of the currently loaded media and the website title. For example, if a page has a video called 'My Video' and 'MediaSpace' is the website title, the page title is: 'My Video - MediaSpace'
footer	MediaSpace™ <a href=http://corp	What is your MediaSpace footer text? default is: MediaSpace video portal by Kaltura
forceIECompatibilityMode	No	Should MediaSpace force IE to use the latest engine when Compatibility Mode is enabled? By default, if compatibility mode is enabled, Internet Explorer renders the page with IE7's engine. Turning on this option forces Internet Explorer to use the latest rendering engine. For more details, please visit this link .
theme		What is the name of your custom MediaSpace theme?

- In the list of configurable items on the left of your screen, locate and click on landingpageshare.

The landingpageshare item will be crossed out because it is disabled by default.

- The landingpageshare window displays.

The screenshot shows the 'Configuration Management' page for the 'Landingpageshare' module. On the left is a sidebar with a list of modules, including 'facebookShare', 'twitterShare', and 'linkedinShare'. The main area displays the 'Landingpageshare' configuration. It includes a 'Module Info' box with fields for 'name' (Landing Page Share), 'description' (This module allows KMS users to share media content to external users), and 'version' (1.1.1). Below this are several configuration options, each with a pull-down menu and a description: 'enabled' (set to 'No'), 'showExternalUrl' (set to 'Yes'), 'externalUrlTemplate' (set to 'https://external.host.name/{1}_g7g'), 'showGenerateEmail' (set to 'Yes'), 'emailTemplateId' (set to 'New Item Pending Moderatic'), and 'emailPopupMessage' (containing a message about public links). A 'Search Configuration' button is located in the top right corner.

- The **Module Info** box displays the module name, description (what enabling this module allows users to do), and version number.

- In the enabled pull-down list, select **Yes** to enable the landingpageshare module.

Other configurable items following the enabled pull-down list are as follows.

Configuration Name	Options	Description
facebookShare	Yes or No	Choose yes to display button to share to Facebook
twitterShare	Yes or No	Choose yes to display button to share to Twitter
linkedinShare	Yes or No	Choose yes to display button to share to LinkedIn

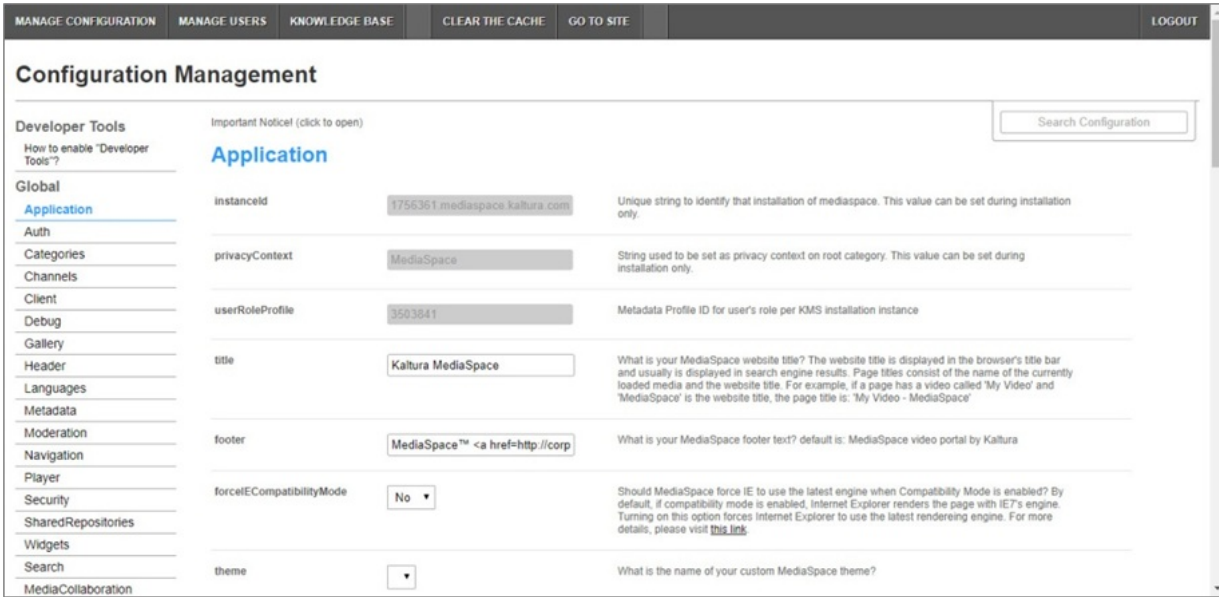

placement	Choose from list	Place to insert external sharing layout. If using Content Hubs, this selection is not necessary; the share panel appears in the Adminembed modal.
-----------	------------------	---

6. Click **Save**.

You receive a notice that your configuration for landingpageshare was saved and the cache was cleared.

Configure access control profile settings via the Admin Embed module

1. Access your Configuration Management console.

The screenshot shows the 'Configuration Management' console. On the left is a sidebar with a 'Developer Tools' section and a 'Global' section containing a list of configurable items: Application, Auth, Categories, Channels, Client, Debug, Gallery, Header, Languages, Metadata, Moderation, Navigation, Player, Security, SharedRepositories, Widgets, Search, and MediaCollaboration. The 'Application' item is selected. The main area displays the 'Application' settings. At the top right of this area is a 'Search Configuration' button. Below the title 'Application', there is a list of settings:

- instanceld**: 1756361.mediaspace.kaltura.com. Description: Unique string to identify that installation of mediaspace. This value can be set during installation only.
- privacyContext**: MediaSpace. Description: String used to be set as privacy context on root category. This value can be set during installation only.
- userRoleProfile**: 3503841. Description: Metadata Profile ID for user's role per KMS installation instance.
- title**: Kaltura MediaSpace. Description: What is your MediaSpace website title? The website title is displayed in the browser's title bar and usually is displayed in search engine results. Page titles consist of the name of the currently loaded media and the website title. For example, if a page has a video called 'My Video' and 'MediaSpace' is the website title, the page title is: 'My Video - MediaSpace'.
- footer**: MediaSpace™ <a href=http://corp. Description: What is your MediaSpace footer text? default is: MediaSpace video portal by Kaltura.
- forceIECompatibilityMode**: No. Description: Should MediaSpace force IE to use the latest engine when Compatibility Mode is enabled? By default, if compatibility mode is enabled, Internet Explorer renders the page with IE7's engine. Turning on this option forces Internet Explorer to use the latest rendering engine. For more details, please visit [this link](#).
- theme**: (dropdown arrow). Description: What is the name of your custom MediaSpace theme?

2. In the list of configurable items on the left of your screen, locate and click on adminembed.

The Adminembed window displays.

Adminembed

Module Info

name	Admin Embed
description	Allows users to generate KMC-like embed codes.
version	2.1.0

Search Configuration

enabled	Yes	Enable the Adminembed module.
autoEmbed	Yes	Enable auto embed option
dynamicEmbed	Yes	Enable dynamic embed option
thumbnailEmbed	Yes	Enable thumbnail embed option
iframeEmbed	Yes	Enable frame embed option
legacyFlashEmbed	Yes	Enable legacy flash embed option. (V2 only)
noFlashVarsInLegacyEmbed	Yes	Remove flashVars param in legacy flash embed code. The embed code may contain plugins, unsupported by the legacy Kaltura player. (V2 only)
makeEmbedPublic	Yes	The generated embed code will make the media public to the world (i.e., all entitlements defined in MediaSpace will be overridden)
outputPluginFlashvars	Yes	Outputs a number of plugins and other flashvars. Set to Yes for backward compatibility. (V2 only)

3. Scroll down to the "enableExternalAccessControl" and "externalShareAccessControl" settings.
4. For "enableExternalAccess Control", choose Yes if you would like for users to be able to allow external sharing for the entry.
5. For "externalShareAccessControl", select which access profile will be used for weak access profile. The visibility for the Admin Embed will be based on this selection. If the user is not on the selected access control profile, they will not see the Admin Embed option.

enableExternalAccessControl		Yes ▼	Enables access control changing
externalShareAccessControl		Default ▼	Which access profile will be used for weak access profile?
checkboxText	Default DO NOT DELETE OR MODIFY - KMS Open access US only France Only		text for external share checkbox
enableWarning	Only Israel users		
disableWarning	Germany Only

6. Click **Save**.

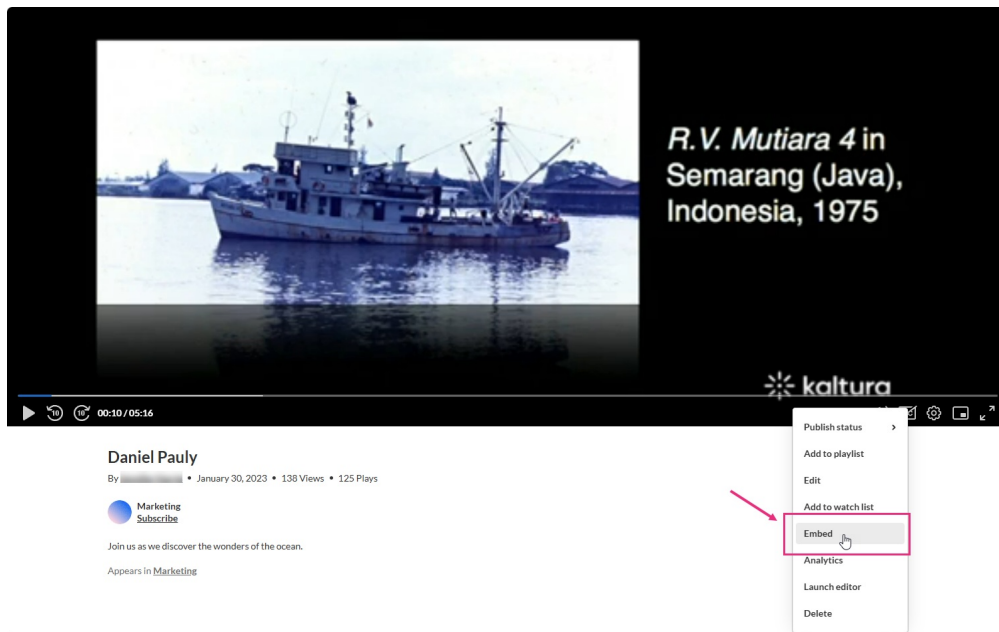

End user experience

Once enabled and configured, a new capability is added to the **Entry page** that allows users to share the video on socials and copy the public link. This capability is accessible on Content Hubs via the **three dots actions menu > Embed**, and on legacy Video Portal via the **Embed tab**.

Content Hubs users:

Once enabled and configured, the Landing Page Share option is accessible via the **three dots actions menu > Embed** on the Entry page.

After selecting the **Embed** menu item, the **Embed screen** is displayed for the user. The user may then click on any of the available socials to share or copy the public link.

Embed

 Grabbing the embed code will make this media public to the world and override all entitlements defined in MediaSpace.

Embed code

```
<div id="kaltura_player_13289016" style="width:400px; height:285px;"></div><script type="text/javascript" src="https://cdnapisec.kaltura.com/p/4353783/embedPlaykitJs/uiconf_id/51919612?autoembed=true&targetId=kaltura_player_13289016&entry_id=1_jg7gq3u4&config[provider]=%7B%22widgetId%22%3A%221_2yc79pb1%22%7D"></script>

Depending on the access control profile settings in the **Adminembed** module, the

user may be able to allow external sharing for this entry via the **Edit entry page > Admin Embed tab**.

Legacy Video Portal users:

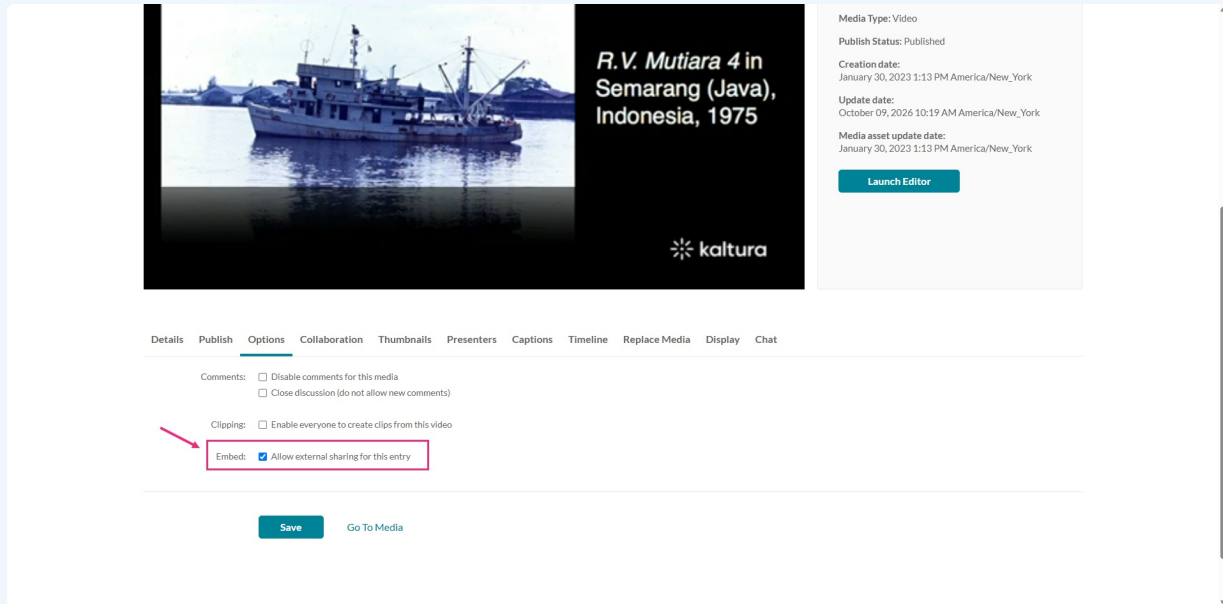

Once enabled and configured for legacy Video Portal users, the Landing Page Share option is accessible via the **Embed** tab on the Entry page.

The user may then click on any of the available socials to share or copy the public link.

Depending on the access control profile settings in the Adminembed module, the user may be able to allow external sharing for this entry via the **Edit entry page > Options tab**.
