Express Capture 2.0 release notes - v1.1.0 November 8, 2026

Version: 1.1.0

Date released: November 8, 2026

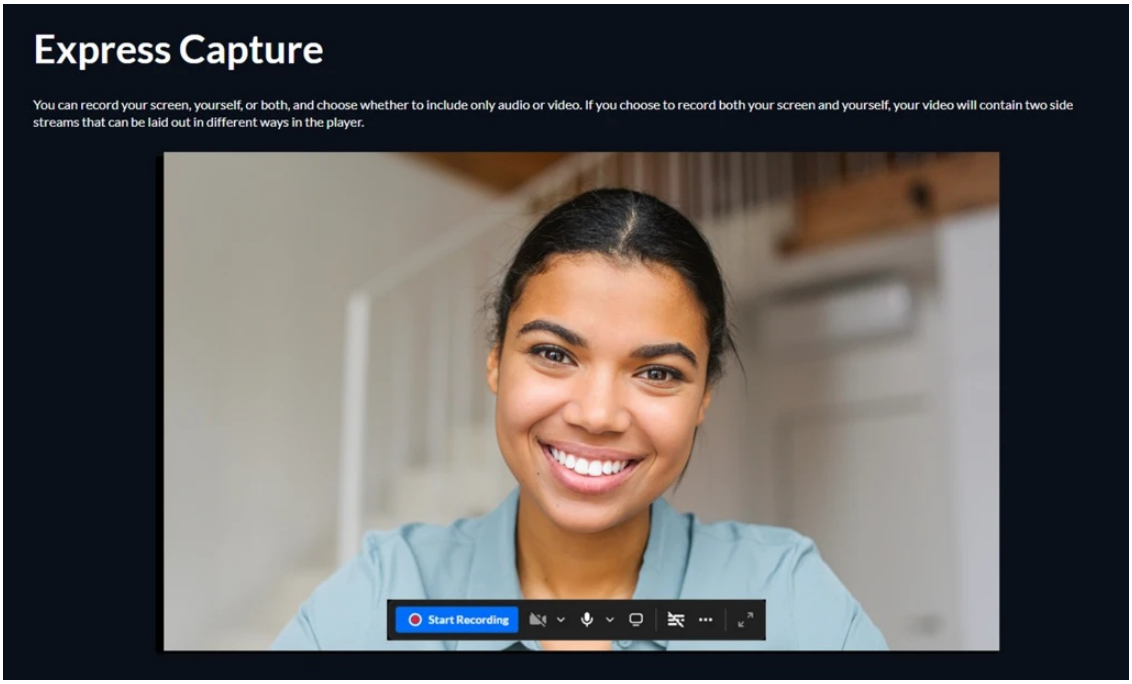

Meet the new Express Capture

Express Capture 2.0 brings a fresh look and new recording features to Content Hubs, LMS Extensions, and, for the first time, Rich Media CMS.

It includes new and improved recording features, including a brand-new **teleprompter**.

Developers can also embed Express Capture 2.0 in their own websites and applications. See **Embed Express Capture** below for details.

The upgraded recording experience includes

Guided recording

Real-time feedback on positioning, lighting, and audio helps you get it right the first time.

- **Framing assistance:** An on-screen guide helps you position yourself in the shot.
- **Lighting assistance:** Get alerts when your surroundings are too dark or too bright.
- **Audio feedback:** Monitor your microphone levels and get alerts when your sound is too low or consistently too high.
- **Improved recording controls:** A redesigned toolbar, clear recording indicator, and pause/resume controls make recording easier. Expand to full screen without cropping your video.

Built-in teleprompter

Stay on script with adjustable scrolling speed and text size.

- **On-screen script:** Type or paste your script and follow it while looking at the camera. The script is visible only to you.
- **Adjustable reading controls:** Choose your preferred scrolling speed, text size, and contrast. Move the teleprompter anywhere over the preview.
- **Automatic synchronization:** Follow your script as it scrolls automatically, pausing and resuming along with your recording.

Professional appearance

Blur your background or choose a virtual background.

- **Background blur:** Choose between light and strong blur.
- **Virtual backgrounds:** Select from six built-in backgrounds or upload your own image.
- **Saved preferences:** Your selected background is remembered for your next recording.

Enhanced audio

Reduce noise, cancel echo, and balance audio levels for clearer sound.

- **Noise suppression:** Reduce unwanted background noise.
- **Echo cancellation:** Minimize echo during recording.
- **Automatic gain control:** Balance audio levels for more consistent sound.

Each audio setting can be turned on or off.

Flexible recording formats

Choose video quality and format settings, including portrait (9:16) recording for mobile-friendly content.

- **Orientation:** Record in landscape (16:9) or portrait (9:16), even with cameras that only support landscape capture.

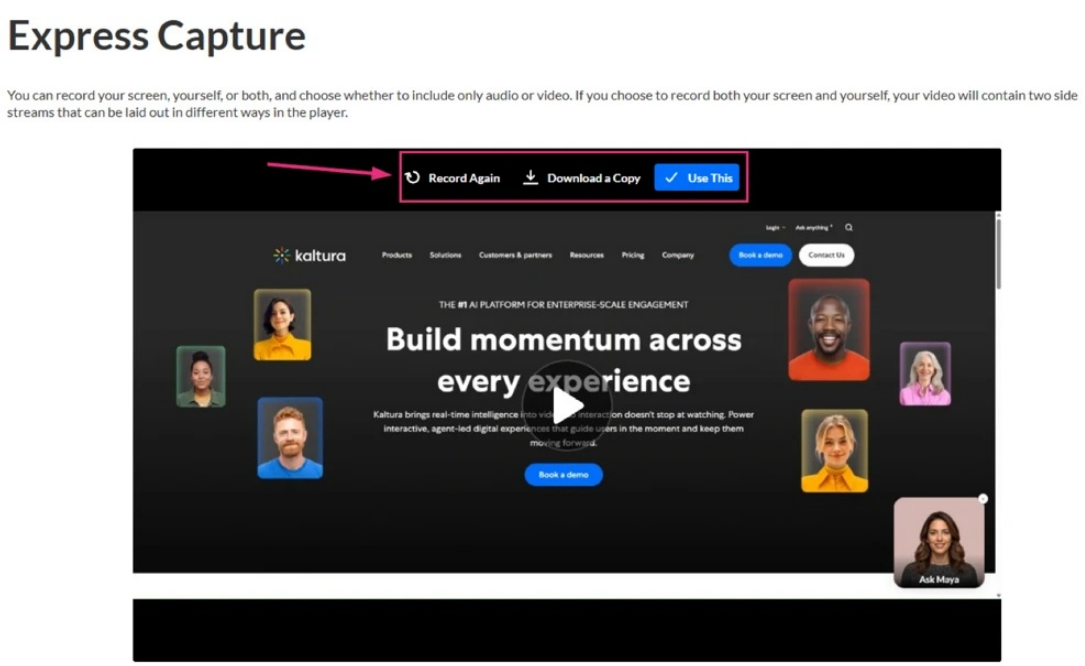

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

- **Video quality:** Choose resolutions from SD to 4K and frame rates from 24 to 60 fps.
- **Format and codec:** Select from available WebM or MP4 formats and supported codecs.
- **Mirror preview:** Flip your camera preview without changing the recorded video.

Available options depend on your camera and browser.

Additional recording features

- **Screen and camera recording:** Record your screen and camera together as separate video streams, allowing viewers to switch between player layouts.
- **Shared audio:** Include audio from a shared browser tab or screen when supported.
- **Review before saving:** Preview your recording, record again, download a copy, or select **Use this** to upload it to Kaltura.
- **Privacy by design:** Recording assistance, background effects, and the teleprompter run locally in your browser. Nothing is sent to Kaltura until you select **Use this**.

Embed Express Capture

Advanced users can embed Express Capture 2.0 in their own websites and applications, and use the API to configure it.

For instructions and API options, see the Kaltura developer documentation.

Enable Express Capture 2.0 in Content Hubs and LMS Extensions

New sites, and sites where the Recorder module wasn't previously enabled, use Version 2.0 by default. Existing sites stay on Version 1.0 until an admin switches them.

To switch, set `RecorderVersion` to **Version 2.0** in the Recorder module (KMS-33989).

Existing Recorder module settings carry over, including allowed roles, maximum recording time, unsupported-browser message, conversion profile, preview player, open in new tab, and screen recording.

- Desktop browsers only; mobile devices and tablets aren't supported.
- The `disableDownload` setting applies to Version 1.0 only.

For more information, see:

- Record with Express Capture 2.0 in Content Hubs
- Record with Express Capture 2.0 in LMS Extensions
- Record with Express Capture 2.0 in Rich Media CMS
- Recorder module
