About

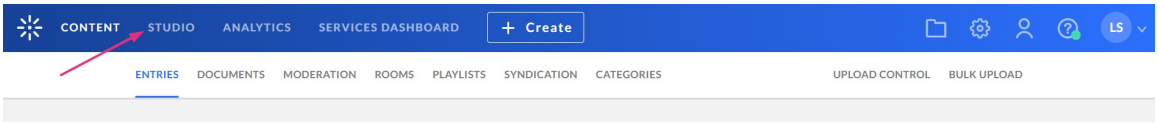

Casting lets viewers send a video from their phone, tablet, or computer to a TV or another device.

The player supports casting with **AirPlay**, for Apple devices, and with **Google Chromecast**. Set up one or both, depending on which devices your viewers use.

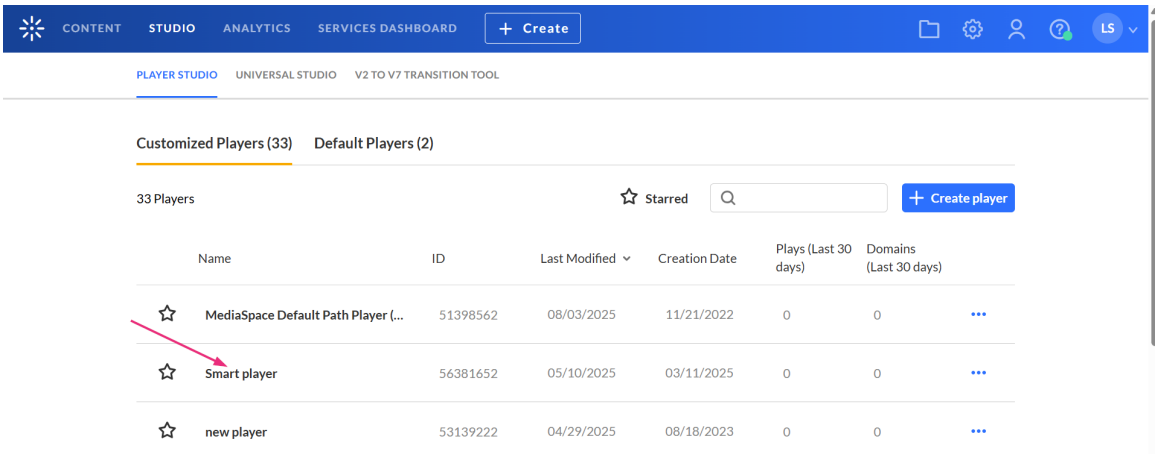

VOD

Access the Integrations settings

1. Log in to your Rich Media CMS and select the **Studio** tab.

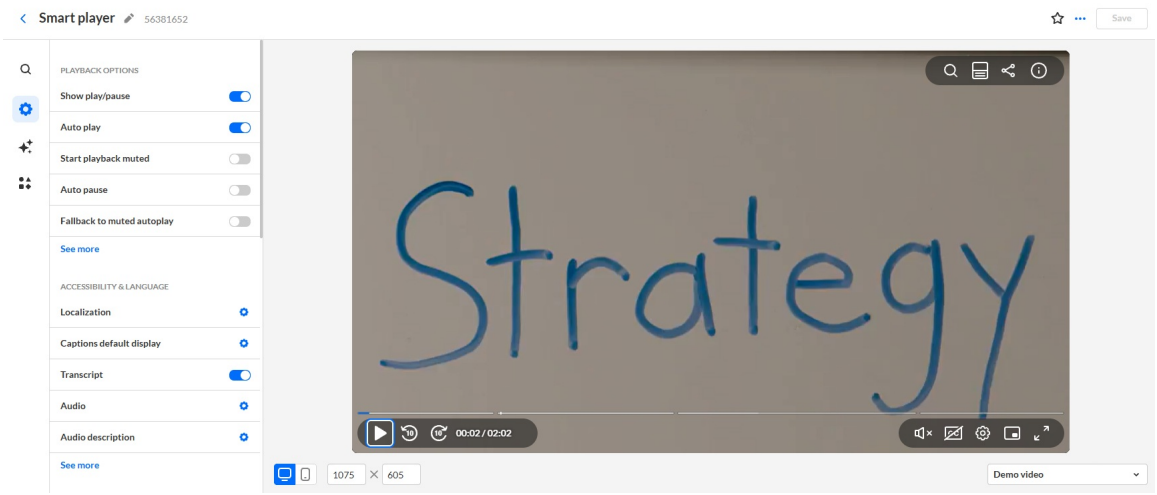

2. From the list, select the player you want to configure.

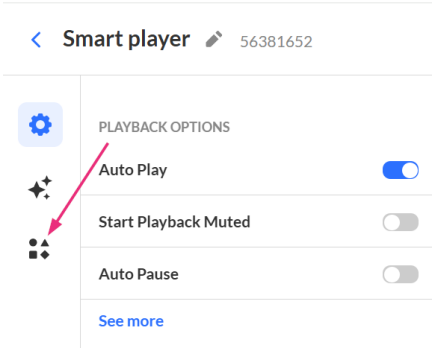

The player settings open.

3. In the left panel, select the **shapes** icon.

The integration settings display.

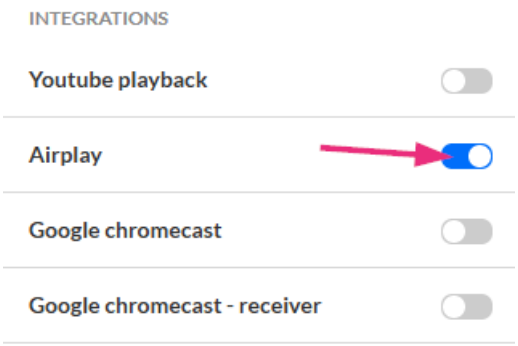

Set up casting with AirPlay (Apple)

AirPlay lets viewers cast from iOS devices using the Apple AirPlay protocol.

1. Next to **AirPlay**, select the toggle to enable the setting.

2. Select **Save** at the top right of the settings page.

Set up casting with Chromecast (Google)

With Chromecast, viewers stream a video using a *sender* and play it on another device, the *receiver*, while they control playback from the sender. The Kaltura player can be either a sender or a receiver, so set up the role that matches how you use this player.

Set the player as a sender

1. Next to **Google Chromecast**, select the toggle to enable the setting.
   More options display.

2. Configure the following:
   - **Application ID** - Enter the Google application ID of the receiver that gets the cast content.
   - **Use VAST ads** - By default, the receiver application uses VMAP ads. Select this

checkbox to use VAST ads instead.

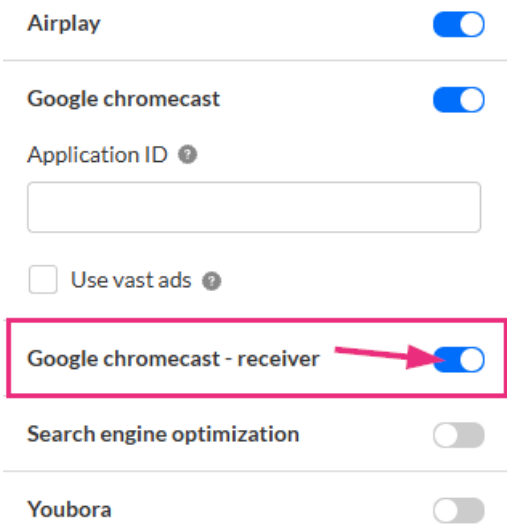

3. Select **Save** at the top right of the settings page.

Set the player as a receiver

When you set a player as a receiver, use that player only in the receiver application.

> All receiver configurations are handled through the customer's receiver application.

1. Next to **Google Chromecast - receiver**, select the toggle to enable the setting.

2. Select **Save** at the top right of the settings page.

For the user guide, see Cast plugin.
