About

Embedding lets you place Kaltura media on another website or page, using an embed code. You can get an embed code from the media page of any media you have access to.

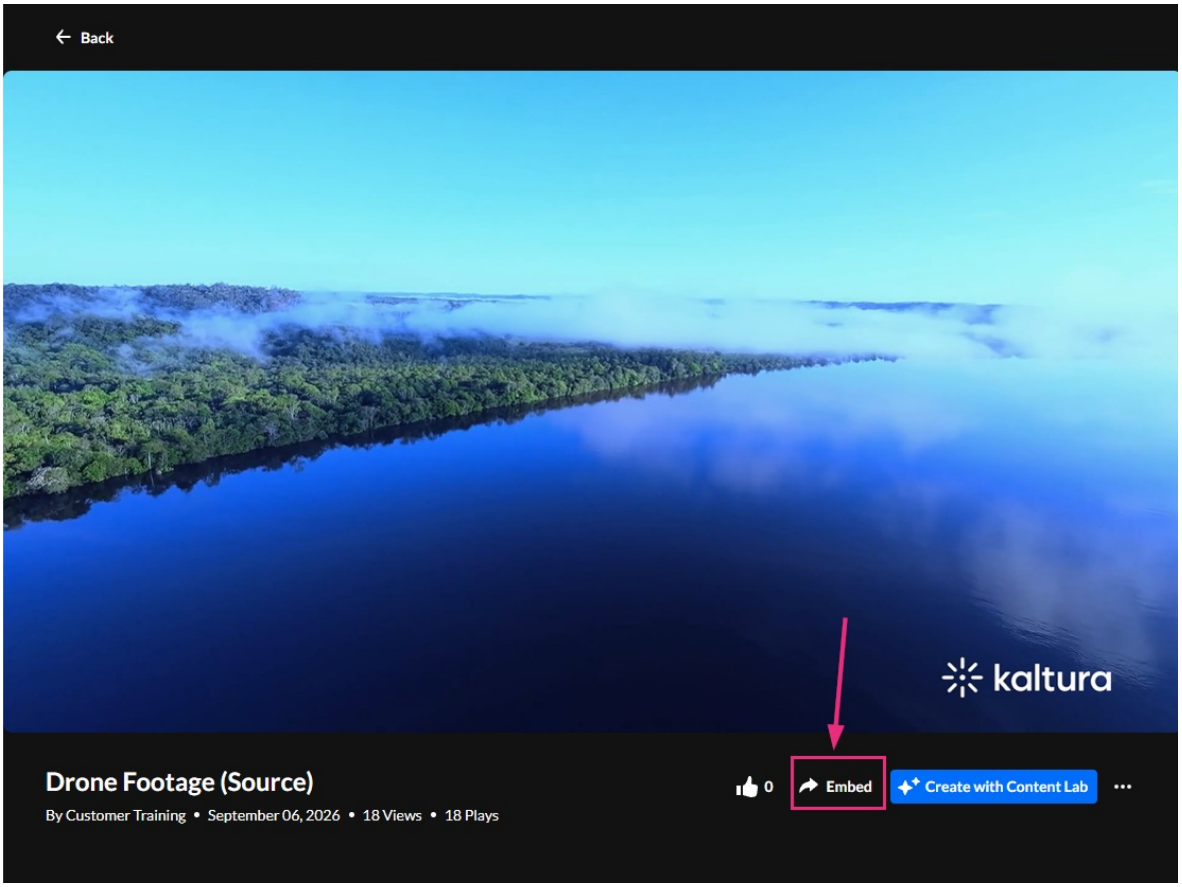

- This feature requires the Share module and the Embed module to be enabled. If you don't see the **Embed** button, contact your administrator.
- To add Kaltura media directly to course content, such as an assignment or a discussion, you don't need an embed code. Use the **Embed Kaltura Media** window in your LMS's rich-text editor instead. For instructions, see the *Embed Kaltura media* article.

For an overview of the various ways to embed Kaltura media, see Introduction to embedding Kaltura media.

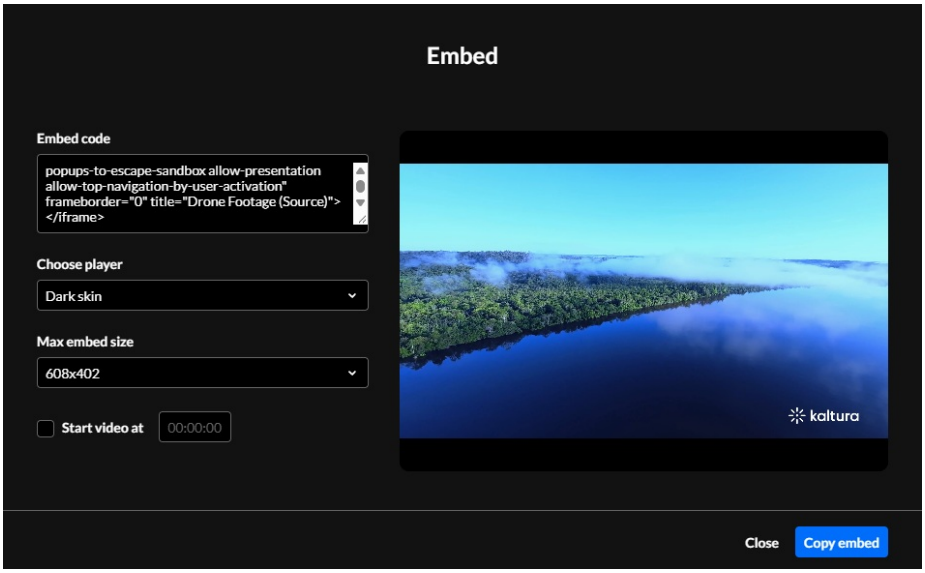

Get an embed code

1. Go to your **My Media**.
2. Click the title or thumbnail of the media you want to embed.
   The media page opens.
3. Click **Embed** under the player.

Copyright © 2025 Kaltura Inc. All Rights Reserved. Designated trademarks and brands are the property of their respective owners. Use of this document constitutes acceptance of the Kaltura Terms of Use and Privacy Policy.

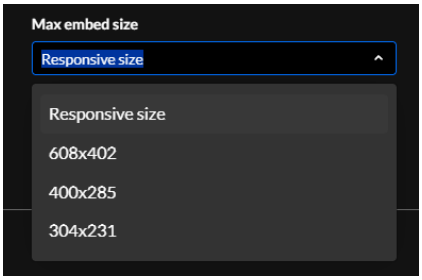

The **Embed** window opens.

4. Select a player from the **Choose player** menu.
5. Select a size from the **Max embed size** menu. If your administrator enabled it, the menu includes **Responsive size**. A responsive embed adjusts to the size of its container, so the video scales with the page layout.

6. (Optional) To start the video at a specific point, select the **Start video at** checkbox, and enter the time in the format given (`00:00:00`). For example, to start the video at 1 minute and 30 seconds, enter `00:01:30` .
7. Click **Copy embed**.

   The link is copied to your clipboard.

8. Click **Close**, and paste the embed code where you want to embed the video.

If your administrator turned on **secure embed** in the Embed module, viewers who aren't logged in see a message asking them to log in, instead of the video.
